**Scientific Explanation and the Causal Structure of the World** Wesley C. Salmon, 2020-11-10 The philosophical theory of scientific explanation proposed here involves a radically new treatment of causality that accords with the pervasively statistical character of contemporary science Wesley C Salmon describes three fundamental conceptions of scientific explanation the epistemic modal and ontic He argues that the prevailing view a version of the epistemic conception is untenable and that the modal conception is scientifically out dated Significantly revising aspects of his earlier work he defends a causal mechanical theory that is a version of the ontic conception Professor Salmon s theory furnishes a robust argument for scientific realism akin to the argument that convinced twentieth century physical scientists of the existence of atoms and molecules To do justice to such notions as irreducibly statistical laws and statistical explanation he offers a novel account of physical randomness The transition from the reviewed view of scientific explanation that explanations are arguments to the causal mechanical model requires fundamental rethinking of basic explanatory concepts *Logic, Deductive and Inductive* John Grier Hibben, 1905 Shallow and Deep Learning Principles Zekâi Şen, 2023-06-01 This book discusses Artificial Neural Networks ANN and their ability to predict outcomes using deep and shallow learning principles The author first describes ANN implementation consisting of at least three layers that must be established together with cells one of which is input the other is output and the third is a hidden intermediate layer For this the author states it is necessary to develop an architecture that will not model mathematical rules but only the action and response variables that control the event and the reactions that may occur within it The book explains the reasons and necessity of each ANN model considering the similarity to the previous methods and the philosophical logical rules Degrees of Belief Steven G. Vick, 2002-01-01 Observing at a risk analysis conference for civil engineers that participants did not share a common language of probability Vick a consultant and geotechnic engineer set out to not only examine why but to also bridge the gap He reexamines three elements at the core of engineering the concepts *Exploratory Modeling and Analysis* Buyung Agusdinata, 2008
