Doing Mathematics with Scientific WorkPlace Darel W. Hardy, Carol L. Walker, 1995 **Algebra, Arithmetic and Geometry with Applications** Chris Christensen, Ganesh Sundaram, Avinash Sathaye, 2004 This volume is the proceedings of the Conference on Algebra and Algebraic Geometry with Applications which was held July 19-26 2000 at Purdue University to honor Professor Shreeram S. Abhyankar on the occasion of his seventieth birthday. Eighty-five of Professor Abhyankar's students, collaborators and colleagues were invited participants. Sixty participants presented papers related to Professor Abhyankar's broad areas of mathematical interest. There were sessions on algebraic geometry, singularities, group theory, Galois theory, combinatorics, Drinfeld modules, affine geometry and the Jacobian problem. This volume offers an outstanding collection of papers by authors who are among the experts in their areas.

Mathematical Methods for Engineers and Scientists 3 Kwong-Tin Tang, 2007-01-10 Pedagogical insights gained through 30 years of teaching applied mathematics led the author to write this set of student-oriented books. Topics such as complex analysis, matrix theory, vector and tensor analysis, Fourier analysis, integral transforms, ordinary and partial differential equations are presented in a discursive style that is readable and easy to follow. Numerous examples completely worked out together with carefully selected problem sets with answers are used to enhance students' understanding and manipulative skill. The goal is to make students comfortable in using advanced mathematical tools in junior, senior and beginning graduate courses.

It's no accident that employers complain that newly minted graduates are out of touch with the realities of work demands. Too often there is a disconnect between what is taught in the classroom and what is demanded in the workplace and students suffer the consequences. Mathematics and science curricula can play a critical role in solving this dilemma. In this comprehensive review of 23 exemplary curricula programs the authors offer an easy-to-use guide for tying curriculum to workplace experiences from a hematology laboratory to an agricultural setting to a soda bottling company. These programs illustrate concrete real-life situations to which students can relate and derive motivation. Learn how to meet the goals of science, mathematics and technology education. Meet national curriculum standards. Chart key characteristics of successful curricula. Connect curriculum to workplace contexts. Create your own curriculum materials. This book is a must for mathematics and science educators, curriculum developers and supervisors and educators in school-to-work programs and vocational courses.
