Domestication Production And Utilization Of New Crops:

Domestication, Production and Utilization of New Crops J. Smartt, N. Haq, 1997 **Global research on underutilized crops: An assessment of current activities and proposals for enhanced cooperation** John Trevor Williams, 2002

Plant Genetic Resources B. S. Dhillon, 2006 Food is the basic need of human beings. The increasing population and enhanced standard of living are placing greater demands on food related requirements in terms of quantity, quality and diversity. The Green Revolution, which significantly enhanced productivity of important food crops, nevertheless resulted in certain fallouts as genetic erosion, soil degradation, chemical pollution and aquifer depletion. Amongst these, decrease in plant genetic diversity is an irreversible loss. As the basic raw material for future plant breeding, plant genetic resources of foodgrains are the key to future food security. Though plant breeding has attracted the attention of many authors, plant genetic resources remain somewhat neglected. This book gives an overall perspective of the current status of genetic resources of important foodgrain crops: wheat, rice, maize, barley, sorghum, millets, pulses and legumes, and underutilized crops. It provides a comprehensive compilation of information on origin, taxonomy, diversity, collection, exchange, evaluation, utilization, molecular characterization and conservation for food grain crops. Eminent scientists and crop specialists have critically analyzed the information in view of the present and future research priorities. In addition, management issues related to plant genetic resources are also discussed. At present, such information on these crops is lacking, and this book fills the void. It shall serve as a reference for genetic resource managers, researchers, teachers, students and policy makers in biology and agriculture.

Plant Breeding Reviews Irwin Goldman, 2018-01-17 Plant Breeding Reviews presents state-of-the-art reviews on plant genetics and the breeding of all types of crops by both traditional means and molecular methods. Many of the crops widely grown today stem from a very narrow genetic base; understanding and preserving crop genetic resources is vital to the security of food systems worldwide. The emphasis of the series is on methodology: a fundamental understanding of crop genetics and applications to major crops. *Global Newsletter of Underutilized Crops (May 1999)*, *Managing Plant Genetic Diversity* V. Ramanatha Rao, A. H. D. Brown, M. Jackson, 2001-12-13 This book contains edited and revised papers from a conference on Science and Technology for Managing Plant Genetic Diversity in the 21st Century held in Malaysia in June 2000, organised by the International Plant Genetic Resources Institute (IPGRI). It includes keynote papers and some 40 additional ones covering ten themes. The major scientific challenges to developing a global vision for the next century are identified and key research objectives are also discussed. *Global Newsletter of Underutilized Crops (March 1998)*,

Proceedings of the 1st International Conference on Indigenous Vegetables and Legumes: Prospectus for Fighting Poverty, Hunger and Malnutrition M. L. Chadha, G. Kuo, C. L. L. Gowda, 2007 **Underutilized and Underexploited Horticultural Crops** K. V. Peter, 2007 Contains information on the following crops: tubers, ornamentals, herbs, spices, vegetables, fruits, energy plants, root crops, flowers, trees, plantation crops and agroforestry crops. **Abiotic Stress: Molecular Genetics and**

Genomics Mukesh Jain, Rohini Garg, Rajeev K Varshney, 2014-12-03 Abiotic stresses are the major cause that limits productivity of crop plants worldwide. Plants have developed intricate machinery to respond and adapt over these adverse environmental conditions both at physiological and molecular levels. Due to increasing problems of abiotic stresses, plant biotechnologists and breeders need to employ new approaches to improve abiotic stress tolerance in crop plants. Although current research has divulged several key genes, gene regulatory networks, and quantitative trait loci that mediate plant responses to various abiotic stresses, the comprehensive understanding of this complex trait is still not available. This e-book is focused on molecular genetics and genomics approaches to understand the plant response/adaptation to various abiotic stresses. It includes different types of articles: original research, method, opinion, and review that provide current insights into different aspects of plant responses and adaptation to abiotic stresses. *A Handbook of Medicinal Plants* Narayan Das Prajapati, 2003. This book describes more than 1346 medicinal plants found in the world.
