Dynamic Modeling In Behavioral Ecology:

Dynamic Modeling in Behavioral Ecology Marc Mangel, Colin Whitcomb Clark, 1988 This book describes a powerful and flexible technique for the modeling of behavior based on evolutionary principles The technique employs stochastic dynamic programming and permits the analysis of behavioral adaptations wherein organisms respond to changes in their environment and in their own current physiological state Models can be constructed to reflect sequential decisions concerned simultaneously with foraging reproduction predator avoidance and other activities The authors show how to construct and use dynamic behavioral models Part I covers the mathematical background and computer programming and then uses a paradigm of foraging under risk of predation to exemplify the general modeling technique Part II consists of five applied chapters illustrating the scope of the dynamic modeling approach They treat hunting behavior in lions reproduction in insects migrations of aquatic organisms clutch size and parental care in birds and movement of spiders and raptors Advanced topics including the study of dynamic evolutionarily stable strategies are discussed in Part III

Modeling Behavior and Population Dynamics Jim M. Cushing, Shandelle M. Henson, James L. Hayward, 2023-12-27 This monograph summarizes several decades of collaborations between ecologists and mathematicians presenting novel applications in biological modeling The authors are among the first researchers to pioneer the use of dynamical systems models to successfully describe and predict animal behavior in relation to environmental changes The text highlights the biological and mathematical techniques used in the research including three main components 1 large data sets on natural populations in the field 2 mathematical models rigorously tied to data which describe explain and predict behavioral dynamics in relation to environmental variables and 3 simplified proof of concept models to probe dynamic mechanisms suggest testable hypotheses and allow study of the consequences of environmental change and evolving traits It is a suitable text for field ecologists interested in the modeling procedures and conclusions addressed therein as well as mathematicians interested in applications to population ecological and evolutionary dynamics

Modeling Populations of Adaptive Individuals Steven F. Railsback, Bret C. Harvey, 2020-05-19 This book offers a new theory for modeling how organisms make tradeoff decisions and how these decisions affect both individuals and populations Tradeoff decisions or behaviors are those that are optimized for survival and include behaviors like foraging and reproduction Existing theories have not painted a complete picture of tradeoff decisions because they only observe how the decisions of an individual affect them rather than how individuals impact and are impacted by the behavior of their communities The authors theory which they call state and prediction based theory uses individual based models since these models show the complex ways that organisms relate to their environment The authors broader approach one that integrates behavior and population dynamics allows ecologists to see how individuals make adaptive tradeoff decisions In simpler terms this theory does not assume as the previous models do that future conditions are fixed known and unaffected by the behavior of others Instead the authors assume individuals make decisions

like people do which is by forecasting future conditions using approximation to make good decisions and updating their choices as conditions change *Encyclopedia of Animal Behavior* ,2009-04-01 The Encyclopedia of Animal Behavior Three Volume Set has engaged with great success the efforts of many of the best behavioral biologists of the 21st century Section editors drawn from the most accomplished behavioral scientists of their generation have enrolled an international cast of highly respected thinkers and writers all of whom have taken great care and joy in illuminating every imaginable corner of animal behavior This comprehensive work covers not only the usual topics such as communication learning sexual selection navigation and the history of the field but also emerging topics in cognition animal welfare conservation and applications of animal behavior The large section on animal cognition brings together many of the world s experts on the subject to provide a comprehensive overview of this rapidly developing area Chapters relating to animal welfare give a full view of behavioral interactions of humans with companion animals farm animals and animals in the wild The key role of animal behavior in conservation biology receives broad attention including chapters on topics such as the effects of noise pollution captive breeding and how the behavioral effects of parasites interacts with conservation issues Animal behavior in environmental biology is highlighted in chapters on the effects of endocrine disruptors on behavior and a large number of chapters on key species such as wolves chimpanzees hyenas and sharks Clear accessible writing complements a wealth of information for undergraduate college students about the essential concepts of animal behavior and the application of those concepts across the field In depth coverage of concepts methods and exemplar organisms serves the needs of graduate students and professionals in the field From the use of behavior in assessing the welfare of pigs to the social behavior of insects from animal empathy to bat brains this authoritative reference with its in depth introductory articles rich array of illustrations interactive cross referenced links and numerous suggested readings can guide the student or the professional to an expanded appreciation of the far flung world of animal behavior An invaluable tool for teaching and a source of enrichment and detail for any topic covered in an animal behavior course the Encyclopedia of Animal Behavior is the definitive reference work in its field and will be for years to come Comprehensive work which covers the usual topics along with emerging areas of animal behavior This encyclopedia contains clear accessible writing and is well illustrated including an online video complimenting a wealth of information As an online reference this work will be subject to period updating This ensures that the work always remains current Contains in depth introductions to the material that make each well illustrated section come alive with the best the new content the discipline has to offer Glossary includes a compendium of behavioral terms that form a succinct mosaic of virtually every concept and phenomenon related to animal behavior Section editors drawn from around the world represent the best and the brightest among today s behavioral biologists and have recruited a broad range of internationally recognized experts Editors in Chief are experienced scientists and writers who between them have authored or edited eight books and teach courses in animal behavior at their respective universities **Consumer-Resource**

Oliveira, Michael Taborsky, H. Jane Brockmann, 2008-03-13 The study of alternative reproductive tactics the behavioural strategies used by individuals to increase their reproductive success is an evolutionary puzzle and one of great interest to researchers For instance why do some males guard both nest and eggs while others sneak into nests while pairs are spawning and fertilise those eggs The field offers a special opportunity to study the evolution and functional causes of phenotypic variation which is a general problem in the field of evolutionary biology By integrating both mechanistic psychological and evolutionary behavioural ecology perspectives and by covering a great diversity of species *Alternative Reproductive Tactics* addresses this integrated topic of longstanding interest bringing together a multitude of otherwise scattered information in an accessible form that is ideal for graduate students and researchers **The Condor**, 1994 [A Dynamic Model of Settlement Patterns of Barnacle Larvae in the Rocky Intertidal](#) Kerry Joanne Little, 1989 **The American Naturalist**, 2008 **Mechanistic Home Range Analysis** Paul Moorcroft, Mark A. Lewis, Mark Lewis, 2006 Spatial patterns of movement are fundamental to the ecology of animal populations influencing their social organization mating systems demography and the spatial distribution of prey and competitors However our ability to understand the causes and consequences of animal home range patterns has been limited by the descriptive nature of the statistical models used to analyze them In *Mechanistic Home Range Analysis* Paul Moorcroft and Mark Lewis develop a radically new framework for studying animal home range patterns based on the analysis of correlated random walk models for individual movement behavior They use this framework to develop a series of mechanistic home range models for carnivore populations

The authors analysis illustrates how in contrast to traditional statistical home range models that merely describe pattern mechanistic home range models can be used to discover the underlying ecological determinants of home range patterns observed in populations make accurate predictions about how spatial distributions of home ranges will change following environmental or demographic disturbance and analyze the functional significance of the movement strategies of individuals that give rise to observed patterns of space use By providing researchers and graduate students of ecology and wildlife biology with a more illuminating way to analyze animal movement Mechanistic Home Range Analysis will be an indispensable reference for years to come Journal of the Experimental Analysis of Behavior ,1991 *Eco-evolutionary Dynamics of Structured and Niche-constructing Populations* Benjamin Kerr,2002 Wildlife Research Report ,2010 Mathematics Magazine ,1990 **Graduate Programs in the Physical Sciences, Mathematics, Agricultural Sciences, the Environment, and Natural Resources 2009** Peterson's,2007-11 The six volumes of Peterson s Annual Guides to Graduate Study the only annually updated reference work of its kind provide wide ranging information on the graduate and professional programs offered by accredited colleges and universities in the United States and U S territories and those in Canada Mexico Europe and Africa that are accredited by U S accrediting bodies Books 2 through 6 are divided into sections that contain one or more directories devoted to individual programs in a particular field Book 4 contains more than 3 800 programs of study in 56 disciplines of the physical sciences mathematics agricultural sciences the environment and natural resources Proceedings ,2001 **Philosophical Transactions** ,2006 Each issue of Transactions B is devoted to a specific area of the biological sciences including clinical science All papers are peer reviewed and edited to the highest standards Published on the 29th of each month Transactions B is essential reading for all biologists **The Causes and Consequences of Host Preferences in Marine Gastropods** Joshua Prince Nowlis,1994 *Physiological Capabilities and Behavioral Strategies for Marine Living by the Smallest Marine Mammal, the Sea Otter (Enhydra Lutris)* Laura Carleen Yeates,2006 **Philosophical Transactions of the Royal Society of London** ,2007
