Dynamic Aspects Of Conformation Changes In Biological Macromolecules:

Dynamic Aspects of Conformation Changes in Biological Macromolecules C. Sadron, 2012-12-06 On the day after the 1959 Cambridge Congress during which the International Union of Pure and Applied Biophysics was founded a biophysics section was formed within the Society of Physical Chemistry Société de Chimie Physique Since then three of the Society's annual meetings the 11th 17th and 23rd were devoted exclusively to the physico chemical study of biological systems The first of these was held in June 1961 at a hotel in Col de Voza at the foot of an alpine glacier above Chamonix The second in May 1967 took place in the more learned setting of the venerable rooms of the National Museum of Natural History in Paris The third the one dealt with in the present volume was recently held at Orleans La Source in the newly built lecture theatres of the young University which is near the great Institutes of the National Centre for Scientific Research CNRS on the Sologne plateau These three stages are milestones of an evolution which characterises at least schematically the explosive evolution of biological physico chemistry The first colloquium with the title Deoxyribonucleic Acid Structure Synthesis and Functions actually marks the first contact of the physical chemist with one of the then most prestigious biological macromolecules the structure of which had just been discovered and in this way celebrated one of the first and most striking successes of molecular biology

Department of Bibliography, 1978 **Macromolecules · 1** Hans-Georg Elias, 1984-02-29 The second edition of this textbook is identical with its fourth German edition and it thus has the same goals precise definition of basic phenomena a broad survey of the whole field integrated representation of chemistry physics and technology and a balanced treatment of facts and comprehension The book thus intends to bridge the gap between the often oversimplified introductory textbooks and the highly specialized texts and monographs that cover only parts of macromolecular science The

text intends to survey the whole field of macromolecular science Its organization results from the following considerations The chemical structure of macromolecular compounds should be independent of the method of synthesis at least in the ideal case Part I is thus concerned with the chemical and physical structure of polymers Properties depend on structure Solution properties are thus discussed in Part II solid state properties in Part III There are other reasons for discussing properties before synthesis For example it is difficult to understand equilibrium polymerization without knowledge of solution thermodynamics the gel effect without knowledge of the glass transition temperature etc Part IV treats the principles of macromolecular syntheses and reactions □□□□□□□□,1976 **Progress in Biophysics and Biophysical Chemistry**

Solvent-Dependent Flexibility of Proteins and Principles of Their Function Aleksandr Ivanovich Ki□a□ivi□a□ri□a□inen,1985 Molecular biology has now advanced to the point where it is no longer possible to give a complete review of the available data on the conformational features of proteins New data keep streaming in and there is obviously an urgent need for some sort of general treatment of the subject A systematic treatment of the large amount of data obtained by a great variety of methods on a great variety of objects must be based on the use of models these should be as simple as possible should conform to well established scientific laws and at the same time be sufficiently flexible The validity of the models finally arrived at is then confirmed or otherwise by testing the conclusions arrived at with their aid by means of experiment After a suitable model has been adopted it can be used in analyzing the experimental data Such an analysis may result in one of three possible situations neither the experimental results nor their interpretation contradict the proposed model the

experimental results do not contradict the proposed model but their interpretation by the authors does finally both the experimental results and their interpretation may be found to be incompatible with the fundamental principles underlying the proposed model The first situation is clearly the most desirable and presents no difficulties **Subject Guide to Books in Print** ,1993
