Dynamic Structure Of Detonation In Gaseous And Dispersed Media:

Dynamic Structure of Detonation in Gaseous and Dispersed Media A.A. Borissov, 2012-12-06 Of late the demands of industry in creating new composite and functional materials with present properties stimulated an increased interest to the investigation of processes which occur in the detonation technologies of complex chemical composition with an additive of disperse particles The collection includes a series of papers presented at the 3d International Conference Lavrentyev Readings on Mathematics Mechanics and Physics Novosibirsk 1990 was held by the Hydrodynamics Institute under the support of the Presidium of the Siberian Branch of the USSR Academy of Sciences to stimulate the international cooperation of the leading international centers In the framework of this Conference the Round Table seminar was held by Prof A Borissov and Prof V Mi trofanov devoted to Dynamic Structure of Detonation in Gaseous and Dispersed Media The idea to hold such Round Table was supported by Chairman of Organizing Committee academician Prof V Titov from Hydrodynamics Institute and academician Prof V Nakoryakov and also his Institute of Thermophysics The main ideas discussed at the Round Table were presented in the form of papers which reflected present situation of the problem of dynamic structure of the detonation waves in gaseous and dispersed media The basic experimental facts concerning of complicated mul ti dimensional non stationary structure both of the detonation wave and its front surface generation of the cell structure the effect of transverse waves obstacles channel geometry etc on the transition from dynamic regime to stationary structure are represented in the fist three papers

Dynamic Aspects of Explosion Phenomena A. L. Kuhl, 1993 The Detonation Phenomenon John H. S. Lee, 2008-06-30 This book introduces the detonation phenomenon in explosives It is ideal for engineers and graduate students with a background in thermodynamics and fluid mechanics The material is mostly qualitative aiming to illustrate the physical aspects of the phenomenon Classical idealized theories of detonation waves are presented first These permit detonation speed gas properties ahead of and behind the detonation wave and the distribution of fluid properties within the detonation wave itself to be determined Subsequent chapters describe in detail the real unstable structure of a detonation wave One two and three dimensional computer simulations are presented along with experimental results using various experimental techniques The important effects of confinement and boundary conditions and their influence on the propagation of a detonation are also discussed The final chapters cover the various ways detonation waves can be formed and provide a review of the outstanding problems and future directions in detonation research

Dust Explosions in the Process Industries Rolf K. Eckhoff, 2003-07-18 Unfortunately dust explosions are common and costly in a wide array of industries such as petrochemical food paper and pharmaceutical It is imperative that practical and theoretical knowledge of the origin development prevention and mitigation of dust explosions is imparted to the responsible safety manager The material in this book offers an up to date evaluation of prevalent activities testing methods design

measures and safe operating techniques Also provided is a detailed and comprehensive critique of all the significant phases relating to the hazard and control of a dust explosion An invaluable reference work for industry safety consultants and students A completely new chapter on design of electrical equipment to be used in areas containing combustible explosible dust A substantially extended and re organized final review chapter containing nearly 400 new literature references from the years 1997-2002 Extensive cross referencing from the original chapters 1-7 to the corresponding sections of the expanded review chapter

Advances in Heat Transfer, 1997-06-12 *Advances in Heat Transfer* is designed to fill the information gap between regularly scheduled journals and university level textbooks by providing in depth review articles over a broader scope than is allowable in either journals or texts Volume 29 is a special volume devoted to nuclear reactor safety

IUTAM Symposium on Interaction Between Dynamics and Control in Advanced Mechanical Systems Dick H. van Campen, 1997-03-31 The proceedings of the April 1996 symposium address a wide variety of applications ranging from vehicle systems to mechatronic systems Further they illuminate the relevancy of more fundamental areas such as control of chaos and optimal control The 51 contributions promote theoretical and applied investigations with respect to the interaction of dynamics and control in advanced engineering applications Additional topics include motion control dynamics and bifurcation of nonlinear systems modelling and dynamics of engineering systems vibration control adaptive control optimization and control mechatronic systems modelling control of engineering systems system identification and analysis and control of nonlinear systems Papers are arranged alphabetically by the first author's last name and there is an author index only no subject index

Eddy Structure Identification in Free Turbulent Shear Flows J.P. Bonnet, M.N. Glauser, 1993-09-30 The existence and crucial role played by large scale organized motions in turbulent flows are now recognized by industrial applied and fundamental researchers alike It has become increasingly evident that coherent structures influence mixing noise vibration heat transfer drag etc The acceleration of the development of both experimental and computational programs devoted to this topic has been evident at several recent international meetings One of the first questions which experimentalists or numerical analysts are faced with is how can these structures be separated from the background turbulence This is a nontrivial task because the coherent structures are generally embedded in a random field and the technique used to determine when and where certain structures are passing or their averaged characteristics in the more probable or dominant role sense is directly related to the definition of the coherent structure Several methods or approaches are available and the choice of a particular one is generally dependent on the desired information This choice depends not only on the definition of the structure but also on the experimental and numerical capabilities available to the researcher

C. Bray, N. Nikiforakis, 1999 IUTAM Symposium on Asymptotic Methods for Turbulent Shear Flows at High Reynolds Numbers K. Gersten, 1996-07-31 This volume contains the contributions presented at the IUTAM Symposium on Asymptotic Methods for Turbulent Shear Flows which was the first international conference on the subject The book provides an overview of the state of the art in this field and presents results found worldwide Asymptotic theory is here considered as the application of perturbation methods singular perturbation methods multiscale methods rapid distortion theory etc to solving the Reynolds averaged flow equations for turbulent shear flows at high Reynolds numbers These methods play an important role in turbulence modelling as is demonstrated by many examples including turbulence models describing flow separation It becomes evident that asymptotic methods enable the extraction of a fairly comprehensive set of results from the governing equations without incorporating a specific turbulence model a priori Furthermore these methods can be used to quickly eliminate unsatisfactory models The book contains valuable results for turbulence researchers in particular for those working in turbulence modelling Proceedings, 2000 Proceedings A publishes refereed research papers in the mathematical physical and engineering sciences The emphasis is on new emerging areas of interdisciplinary and multidisciplinary research Continues Proceedings Mathematical and physical sciences The Cumulative Book Index, 1992 A world list of books in the English language **Modeling in Combustion Science** John David Buckmaster, Tadao Takeno, 1995-05-17 The articles in this volume treat various problems in combustion science that are of importance in applications to technology and to environmental sciences The authors treat turbulence in premixed and non premixed flames as well as pressure interactions and wave phenomena Also supersonic flows and detonations are discussed The main emphasis however is on the modelling and numerical treatment of combustion phenomena The book addresses researchers in physics and engineering and mathematicians from scientific computing *Advances in Turbulence*, 1998 **Scientific and Technical Aerospace Reports**, 1967 *Jet Cutting Technology* A. Lichtarowicz, 1992-10-31 This volume contains papers presented at the 11th International Conference on Jet Cutting Technology held at St Andrews Scotland on 8-10 September 1992 Jetting techniques have been successfully applied for many years in the field of cleaning and descaling Today however jet cutting is used in operations as diverse as removing cancerous growths from the human body decommissioning sunsea installations and disabling explosive munitions The diversity is reflected in the papers presented at the conference The papers were divided into several main sections jetting basics materials jetting basics fluid mechanics mining and quarrying civil engineering new developments petrochem cleaning and surface treatment and manufacturing The high quality of papers presented at the conference has further reinforced its position as the premier event in the field The volume will be of interest to researchers developers and manufacturers of systems equipment users and contractors
