Dynamics of Controlled Mechanical Systems with Delayed Feedback H.Y. Hu,Z.H. Wang,2010-12-05 Recent years have witnessed a rapid development of active control of various mechanical systems With increasingly strict requirements for control speed and system performance the unavoidable time delays in both controllers and actuators have become a serious problem For instance all digital controllers analogue anti aliasing and reconstruction filters exhibit a certain time delay during operation and the hydraulic actuators and

human being interaction usually show even more significant time delays. These time delays, albeit very short in most cases, often deteriorate the control performance or even cause the instability of the system because the actuators may feed energy at the moment when the system does not need it. Thus the effect of time delays on the system performance has drawn much attention in the design of robots, active vehicle suspensions, active tendons for tall buildings as well as the controlled vibro impact systems. On the other hand, the properly designed delay control may improve the performance of dynamic systems. For instance, the delayed state feedback has found its applications to the design of dynamic absorbers, the linearization of nonlinear systems, the control of chaotic oscillators, etc. Most controlled mechanical systems with time delays can be modeled as the dynamic systems described by a set of ordinary differential equations with time delays.

IUTAM Symposium on Dynamics and Control of Nonlinear Systems with Uncertainty H.Y. Hu, E. Kreuzer, 2007-08-26

The last decade has witnessed an increasing interest towards the dynamics and control of nonlinear engineering systems from the scientists engaged in nonlinear dynamics and the control engineers. Both groups of people have recognized the importance of interaction between nonlinear dynamics and robust control during their efforts to improve the dynamic performance of engineering systems with uncertainty, which comes from either the random excitations such as wind and earthquake or the modelling errors of real systems including their sensors, controllers and actuators. The dynamics and control of nonlinear systems with uncertainty therefore is a vital interdisciplinary topic related to both stochastic systems and deterministic systems. This volume contains the papers presented at the IUTAM Symposium on Dynamics and Control of Nonlinear Systems with Uncertainty, which was sponsored by the International Union of Theoretical and Applied Mechanics (IUTAM) and held at Nanjing University of Aeronautics and Astronautics, China, 18-22 September 2006. The aim of the

symposium was to bringing together the scientists to discuss the advances in dynamics and control of nonlinear systems especially those with uncertainties in either system modeling or excitation The scientific committee appointed by the Bureau of IUTAM includes the following members F L Chernousko Moscow Russia E Kreuzer Hamburg Germany Co Chairman H Y Hu Nanjing China Chairman A H Nayfeh Blacksburg USA G Rega Rome Italy W Schiehlen Stuttgart Germany IUTAM representative K Sobczyk Warsaw Poland G Stepan Budapest Hungary H Troger Wien Austria ix x Preface IEEE Transactions on Circuits and Systems ,2006 **Vibration, Structural Engineering and Measurement II** Chun Liang Zhang,Paul P.
