Dynamics And Friction In Sub Micron Confining Systems:

Frontiers in Nanoscale Science of Micron/Submicron Devices A.-P. Jauho, Eugenia V. Buzaneva, 1996-10-31 Nanoscale Science whose birth and further growth and development has been driven by the needs of the microelectronics industry on one hand and by the sheer human curiosity on the other hand has given researchers an unprecedented capability to design and construct devices whose functionality is based on quantum and mesoscopic effects A necessary step in this process has been the development of reliable fabrication techniques in the nanometer scale two dimensional systems quantum wires and dots and Coulomb blockade structures with almost ideal properties can nowadays be fabricated and subjected to experimental studies How does one fabricate micro nanostructures of low dimensionality How does one perform a nanoscale characterization of these structures What are the fundamental properties typical to the structures Which new physical processes in nanostructures need to be understood What new physical processes may allow us to create new nanostructures An improved understanding of these topics is necessary for creation of new concepts for future electronic and optoelectronic devices and for characterizing device structures based on those concepts *Forthcoming Books* Rose Arny, 2004

Quantum Transport in Semiconductor Submicron Structures B. Kramer, 2012-12-06 The articles in this book have been selected from the lectures of a NATO Advanced Study Institute held at Bad Lauterberg Germany in August 1995 Internationally well known researchers in the field of mesoscopic quantum physics provide insight into the fundamental physics underlying the mesoscopic transport phenomena in structured semiconductor inversion layers In addition some of the most recent achievements are reported in contributed papers The aim of the volume is not to give an overview over the field Instead emphasis is on interaction and correlation phenomena that turn out to be of increasing importance for the understanding of the phenomena in the quantum Hall regime and in the transport through quantum dots The present status of the quantum Hall experiments and theory is reviewed As a key example for non Fermi liquid behavior the Luttinger liquid is introduced including some of the most recent developments It is not only of importance for the fractional quantum Hall effect but also for the understanding of transport in quantum wires Furthermore the chaotic and the correlation aspects of the transport in quantum dot systems are described The status of the experimental work in the area of persistent currents in semiconductor systems is outlined The construction of one of the first single electron transistors is reported The theoretical approach to mesoscopic transport presently a most active area is treated and some aspects of time dependent transport phenomena are also discussed Dynamics in Small Confining Systems V: Volume 651 J. The Chemical Physics of Fullerenes 10 (and 5) Years Later W. Andreoni, 1996-03-31 A decade has elapsed since the discovery of C60 in molecular beams and five years since the first synthesis of solid C60 At the time the opening of a new era for chemistry was foreseen and high expectations were shared by physicists and material scientists Where are we now Where are we aiming What can we expect from now on The answer will be found in this volume written by the protagonists of the fullerene adventure There is a whole new generation of materials now in the form of molecules solids nanostructures either directly derived from Bucky or inspired by it They continue to create new challenges to our fundamental understanding and seem to be ready for important long lasting applications Audience The book is mainly directed to specialized scientists physicists chemists material scientists and biochemists who will find it a source of learning and inspiration Younger researchers too will find it fascinating since it allows them to learn about and quickly acquire a critical view of an interdisciplinary frontier subject
