Dupuytren's Disease Pathobiochemistry And Clinical Management:

Dupuytren's Disease Alfred Berger, Axel Delbrück, Peter Brenner, Rolf Hinzmann, 2012-12-06 In this volume a distinguished group of internationally renowned clinicians and basic researchers discuss the present state of knowledge of the etiology and pathogenesis of Dupuytren's contracture a disease responsible for a considerable portion of disabilities within the working population all over the world Although the riddle of how the contracture of the palmar fascia develops is still unsolved the data on the pathobiochemistry and clinic of Dupuytren's Disease achieved in recent years has led to a better understanding of the biochemical and morphological processes underlying the deformation and malfunction of the afflicted tissues Research in Dupuytren's Disease now enters the era of molecular medicine which opens up new experimental means of studying the pathological changes which occur during the formation of the contracture on a molecular level In particular data are presented as to the role of specific biological macromolecules influencing the phenotype expression of the palmar fascia cells which are involved in autoimmune reactions and present both at the cell surface as well as in the extracellular matrix to regulate cell to cell and cell to matrix interactions In vitro cell culture models to investigate fibrocytic modulations are available and have been applied to study the effects of specific biological molecules on isolated cells from healthy palmar fascia and Dupuytren's contracture Complementary evaluations of morphological epidemiological and clinical data contribute essentially to the present understanding of the etiology and pathogenesis of Dupuytren's Disease This comprehensive and informative summary of the state of the art is completed by numerous references affixed to the individual contributions

Dupuytren's Disease Peter Brenner, Ghazi M. Rayan, 2012-12-06 Morbus Dupuytren is particularly widespread among northern Europeans However the therapeutic success rate often leaves much to be desired A 50% recurrence rate after surgery indicates that the disease cannot be treated by surgery alone This book therefore adopts two parallel approaches emphasis is firstly placed on the systemic character of morbus Dupuytren in context with other connective tissue diseases by a description of the biochemical and molecular biological changes in the diseased connective tissues secondly a diversified picture of the given anatomical facts serves to explain the employment of the various therapeutic approaches Further a description is given of the current surgical procedures

Non-Malignant Disorders Michael Heinrich Seegenschmiedt, Hans-Bruno Makoski, Klaus-Rüdiger Trott, Luther W.

Brady, 2009-04-15 Non malignant or benign diseases can be successfully treated using ionizing radiation technologies It was first proposed in 1898 by Sokoloff who reported the analgesic effects of radiotherapy for painful rheumatoid arthritis Since then the use of these techniques for painful muscle skeletal diseases has gained acceptance particularly in Europe but is still carried out actively in the United States Non malignant diseases that are amenable to radiotherapy can be classified as inflammatory degenerative hyperproliferative functional or other disorders However the topographic and morphologic considerations are more relevant Even though radiation therapy for benign diseases has not been pursued actively since the 1950s more recent interest has dictated that it can be a very effective treatment modality The use of radiotherapy can be justified for invasive and aggressive growth such as that seen with desmoids for cosmetic deformations and functional loss as seen with keloids or endocrine orbitopathy or for life threatening complications such as hepatic hemangiomas or juvenile angiofibromas that occur in children or adolescents Many of the non malignant diseases can have a major and lasting effect on quality of life by causing pain or other serious symptoms particularly when other methods of treatment are unavailable have failed or may induce more side effects It is not generally the first choice of therapy in these non malignant diseases but it is acceptable as defined The book edited by Seegenschmiedt et al **Journal of Submicroscopic Cytology and**
