Franklin, J.

David Powell, Abbas Emami-Naeini, 1994 Emphasizing modern topics and techniques this text blends theory and real world practice mixes design and analysis introduces design early and represents physically what occurs mathematically in feedback control of dynamic systems Highlights of the book include realistic problems and examples from a wide range of application areas New to this edition are much sharper pedagogy an increase in the number of examples more thorough development of the concepts a greater range of homework problems a greater number and variety of worked out examples expanded coverage of dynamics modelling and Laplace transform topics and integration of MATLAB including many examples that are formatted in MATLAB

Influence of flight control laws on structural sizing of commercial aircraft Rahmetalla Nazzeri, 2021-11-15 The increasing demand for new civil aircraft pushes aircraft manufacturers to develop innovative solutions that lead in particular to mass reductions One way to achieve these kinds of improvements is the use of multidisciplinary analysis and optimization In this sense the intention of this PhD thesis is to develop a multidisciplinary framework in order to quantify the impact of load alleviation function parameter changes on structural components like the wing and fuselage in terms of resulting mass changes The developed iterative process chain covers the loads calculation including an active load alleviation system a structural assessment of the wing and fuselage components and a dedicated feedback loop in order to update mass and stiffness properties of the loads calculation model The study shows that significant mass reductions are achievable while on the other hand estimated mass penalties are irrelevant
