Rationality Peter S. Albin, 1998-04-26 Peter Albin is known for his seminal work in applying the concepts of adaptive dynamical systems first developed by biologists and physicists to the study of economic systems This book is a collection of his pathbreaking articles on the application of cellular automata and complexity theory to economic problems Duncan Foley provides a thoughtful introduction in which he reviews the disparate analytical sources of Albin's work in the theories of nonlinear dynamical systems economic dynamics cellular automata linguistic and computational complexity and bounded rationality Albin has analyzed economic systems as interactions of highly complex components i e intelligent human beings He uses the theories of generative linguistics and cellular automata to establish that the complexity level of economic systems is in principle at least that of a Turing machine or general purpose computer establishing that classic economic approaches to the problems of household and firm choice macroeconomic prediction and policy evaluation may give rise to undecidable propositions and uncomputable functions He develops simple models of dynamic economic interaction based on cellular automata which illustrate the inherent complexity of economic interactions and the resulting challenge they pose to traditional theories of rational economic behavior These models explore the dynamics of the business cycle decentralized market trading and the emergence of cooperation in a novel local interaction version of the repeated prisoners dilemma game Albin's work provides a unique and important perspective on economic systems *Barriers and Bounds to Rationality*

certain economic processes This book discusses the common properties of adaptive processes role of the decision maker and mixed adaptive processes of the first and second kind The economic environmental processes concept of entropy time and stochastic dynamic economic process are also elaborated This text likewise covers the investment model with full liquidity adaptive capital allocation process and concept of an economic state space Other topics include the stochastic equilibrium in the market and individual adaptive behavior This volume is suitable for engineers economists and specialists of disciplines related to economic systems Feedback Economics Robert Y. Cavana, Brian C. Dangerfield, Oleg V. Pavlov, Michael J. Radzicki, I. David Wheat, 2021-06-30 This book approaches economic problems from a systems thinking and feedback perspective By introducing system dynamics methods including qualitative and quantitative techniques and computer simulation models the respective contributions apply feedback analysis and dynamic simulation modeling to important local national and global economics issues and concerns Topics covered include an introduction to macro modeling using a system dynamics framework a system dynamics translation of the Phillips machine a re examination of classical economic theories from a feedback perspective analyses of important social ecological and resource issues the development of a biophysical economics module for global modelling contributions to monetary and financial economics analyses of macroeconomic growth income distribution and alternative theories of well being and a re examination of scenario macro modeling The contributions also examine the philosophical differences between the economics and system dynamics communities in an effort to bridge existing gaps and compare methods Many models and other supporting information are provided as online supplementary files Consequently the book appeals to students and scholars in economics as well as to practitioners and policy analysts interested in using systems thinking and system dynamics modeling to understand and improve economic systems around the world Clearly there is much space for more collaboration between the advocates of post Keynesian economics and system dynamics More generally I would like to recommend this book to all scholars and practitioners interested in exploring the interface and synergies between economics system dynamics and feedback thinking Comments in the Foreword by Marc Lavoie Emeritus Professor University of Ottawa and University of Sorbonne Paris Nord The Stabilization Policy and Controllability of Dynamic Economic Systems ,1983
