D. Burton,P. G. Brewer,R. Chesselet,2014-01-15 **Dynamic Processes in the Chemistry of the Upper Ocean** J.D. Burton,P.G. Brewer,R. Chesselet,2012-12-27 The Advanced Research Institute ARI on Dynamic Processes in the Chemistry of the Upper Ocean had its origins in discussions by the NATO Special Programme Panel on Marine Sciences during 1978 when a wide range of topics for future ARIs was being considered What was then envisaged was a workshop on chemical aspects of the oceanic mixed layer at which consideration would be given to the inputs cycling and removal of material and the problems involved in the quantitative assessment of fluxes It was realised that any attempt to model chemical processes would need the active collaboration of workers from other fields especially physical oceanographers concerned with air sea interaction and turbulence and biological oceanographers with expertise in primary productivity and the cycling of particulate and dissolved organic material As plans for the ARI developed further a somewhat different emphasis emerged focused on the question as to how chemists should set about observing an environment as variable and dynamic as the upper ocean and selecting the appropriate scales for the framework of measurements to study a particular process especially in the light of current knowledge of physical processes of transport and mixing It was plain that the capability of physical oceanographic methods to resolve differences on small spatial and temporal scales is considerably ahead of the capabilities of biologists and chemists who rely upon discrete sampling and complex laboratory manipulations in order to obtain most of their data **Proceedings of a NATO Advanced Research Institute on Dynamic Processes in the Chemistry of the Upper Ocean** Organización del Tratado del Atlántico Norte Advanced Research Institute on Dynamic Processes in the Chemistry of the Upper Ocean,1986 **The Oceans and Marine Geochemistry** H. Elderfield,2006-06-20 The Treatise on Geochemistry is the first work providing a comprehensive integrated summary of the present state of geochemistry It deals with all the major subjects in the field ranging from the chemistry of the solar system to environmental geochemistry The Treatise on Geochemistry has drawn on the expertise of outstanding scientists throughout the world creating the reference work in geochemistry for the next decade Each volume consists of fifteen to twenty five chapters written by recognized authorities in their fields and chosen by the Volume Editors in consultation with the Executive Editors Particular emphasis has been placed on integrating the subject matter of the individual chapters and volumes Elsevier also offers the Treatise on Geochemistry in electronic format via the online platform ScienceDirect the most comprehensive database of academic research on the Internet today enhanced by a suite of sophisticated linking searching and retrieval tools **Annual Report** Woods Hole Oceanographic Institution,1986 Heavy Metals in the Marine Environment Robert W. Furness,2018-01-18 The aim of this volume is to draw together state of the art reviews of knowledge

on levels of heavy metals in marine environments particularly in marine animals the dynamic processes in these systems toxic effects and threats presented by heavy metals in foods of marine origin All heavy metals whether biologically essential or not have the potential to be toxic to organisms at a threshold bioavailability Such threshold concentrations vary between metals between species and with the physicochemical characteristics of the medium some like copper being particularly toxic even though essential in trace amounts Responses of animals to metals in their medium or food depend to a large extent on the ability of species to regulate levels attained in their tissues Higher animals have the capacity to regulate levels of many metals while marine invertebrates can regulate some within certain limits Where animals cannot regulate physiological levels of metals an alternative strategy is to detoxify and store metals in relatively harmless forms Knowledge of the manner in which animals deal with potentially toxic concentrations of heavy metals is of fundamental importance in the assessment of metal pollution by analysis of metal levels in biological samples The interaction of heavy metals with biological materials is a key theme running through this volume Toxic effects may be reflected at the individual population or ecosystem level affecting species composition and production levels or may be of direct dietary significance to man The global cycling of metals through the marine environment is crucially affected by biological processes

Trace Metals in Aquatic Systems Robert P. Mason, 2013-02-20 This book provides a detailed examination of the concentration form and cycling of trace metals and metalloids through the aquatic biosphere and has sections dealing with the atmosphere the ocean lakes and rivers It discusses exchanges at the water interface air water and sediment water and the major drivers of the cycling concentration and form of trace metals in aquatic systems The initial chapters focus on the fundamental principles and modelling approaches needed to understand metal concentration speciation and fate in the aquatic environment while the later chapters focus on specific environments with case studies and research highlights Specific examples deal with metals that are of particular scientific interest such as mercury iron arsenic and zinc and the book deals with both pollutant and required nutrient metals and metalloids The underlying chemical principles controlling toxicity and bioavailability of these elements to microorganisms and to the aquatic food chain are also discussed Readership Graduate students studying environmental chemistry and related topics as well as scientists and managers interested in the cycling of trace substances in aqueous systems Additional resources for this book can be found at www.wiley.com/go/mason/trace_metals
