Dynamical Systems On Homogeneous Spaces

Robert Hermann

Dynamical Systems On Homogeneous Spaces:

Dynamical Systems on Homogeneous Spaces Aleksandr N. Starkov, 2000 A homogeneous flow is a dynamical system generated by the action of a closed subgroup H of a Lie group G on a homogeneous space of G The study of such systems is of great significance because they constitute an algebraic model for more general and more complicated systems Also there are abundant applications to other fields of mathematics most notably to number theory The present book gives an extensive survey of the subject In the first chapter the author discusses ergodicity and mixing of homogeneous flows The second chapter is focused on unipotent flows for which substantial progress has been made during the last 10 15 years The culmination of this progress was M Ratner's celebrated proof of far reaching conjectures of Raghunathan and Dani The third chapter is devoted to the dynamics of nonunipotent flows The final chapter discusses applications of homogeneous flows to number theory mainly to the theory of Diophantine approximations In particular the author describes in detail the famous proof of the Oppenheim Davenport conjecture using ergodic properties of homogeneous flows

Dynamical Systems on Homogeneous Spaces Alexander N. Starkov Aleksandr N. Starkov, Starkov a mathematician supported by the Russian Foundation of Basic Research begins with an introduction to ergodic theory topological dynamics Lie groups linear algebraic groups and finite volume spaces which ultimately lead him to discussions of ergodicity and mixing of homogeneous flows the dynamics of unipotent and nonunipotent flows and applications of these topics to number theory Specific topics include the ergodic decomposition rigidity of the horocycle flow and exponential mixing Annotation copyrighted by Book News Inc Portland OR

Ergodic Theory and Topological Dynamics of Group Actions on Homogeneous Spaces M. Bachir Bekka, Matthias Mayer, 2000-05-11 This book first published in 2000 focuses on developments in the study of geodesic flows on homogenous spaces

Dynamical Systems IX D.V. Anosov,2013-03-14 This volume is devoted to the hyperbolic theory of dynamical systems
DS that is the theory of smooth DS s with hyperbolic behaviour of the tra jectories generally speaking not the individual
trajectories but trajectories filling out more or less significant subsets in the phase space Hyperbolicity the property that
under a small displacement of any of a trajectory consists in point of it to one side of the trajectory the change with time of
the relative positions of the original and displaced points resulting from the action of the DS is reminiscent of the mot ion
next to a saddle If there are sufficiently many such trajectories and the phase space is compact then although they tend to
diverge from one another as it were they have nowhere to go and their behaviour acquires a complicated intricate character
In the physical literature one often talks about chaos in such situations This type of be haviour would appear to be the
opposite of the more customary and simple type of behaviour characterized by its own kind of stability and regularity of the
motions these words are for the moment not being used as a strict ter 1 minology but rather as descriptive informal terms
The ergodic properties of DS s with hyperbolic behaviour of trajectories Bunimovich et al 1985 have already been considered
in Volume 2 of this series In this volume we therefore consider mainly the properties of a topological character see below 2

volumes are a valuable resource for dynamicists seeking to acquaint themselves with other specialties in the field and to
