Coherent Structures in Complex Systems D. Reguera, L.L. Bonilla, J.M. Rubi, 2008-01-11 A rich variety of real life physical problems which are still poorly understood are of a nonlinear nature Examples include turbulence granular flows detonations and flame propagation fracture dynamics and a wealth of new biological and chemical phenomena which are being discovered Particularly interesting among the manifestations of nonlinearity are coherent structures This book contains reviews and contributions reporting on the state of the art regarding the role of coherent structures and patterns in nonlinear science

Progress in Industrial Mathematics at ECMI 2000 Angelo M. Anile, Vincenzo Capasso, Antonio Greco, 2013-06-29 Realizing the need of interaction between universities and research groups in industry the European Consortium for Mathematics in Industry ECMI was founded in 1986 by mathematicians from ten European universities Since then it has been continuously extending and now it involves about all Euro pean countries The aims of ECMI are To promote the use of mathematical models in industry To educate industrial mathematicians to meet the growing demand for such experts To operate on a European Scale Mathematics as the language of the sciences has always played an im portant role in technology and now is applied also to a variety of problems in commerce and the environment European industry is increasingly becoming dependent on high technology and the need for mathematical expertise in both research and development can only grow These new demands on mathematics have stimulated academic interest in Industrial Mathematics and many mathematical groups world wide are committed to interaction with industry as part of their research activities ECMI was founded with the intention of offering its collective knowledge and expertise to European Industry The experience of ECMI members is that similar technical problems are encountered by different companies in different countries It is also true that the same mathematical expertise may often be used in differing industrial applications

Pattern Formation In Complex Dissipative Systems: Fluid Patterns, Liquid Crystals, Chemical Reactions S Kai, 1992-09-15 In this volume the problems of pattern formation in physics chemistry and other related fields in complex and

nonlinear dissipative systems are studied Main subjects discussed are formation mechanisms properties statistics characterization and dynamics of periodic and nonperiodic patterns in the electrohydrodynamics in liquid crystals Rayleigh Benard convection crystallization viscous fingering and Belousov Zhabotinsky chemical reaction Recent developments in topological and defect mediated chaos chaos in systems with large degrees of freedom and turbulence turbulence transitions are also discussed

Growth and Form M. Ben Amar, P. Pelcé, P. Tabeling, 2012-12-06 Growth and Form is the title of a famous book written by Darcy Thomson at the beginning of the century It relates a large number of problems of shapes of bodies either in the physical world or the biological realm Keywords in this field are shapes spirals growth law gravity field surface tension scaling laws diffusion and mechanical efficiency This field is the source of a considerable amount of work even today and this conference was a place where some of this work was discussed Except for a few contributions with biophysical inspiration the main part of the conference was devoted to physical problems related to growth and form and especially to the problem of the motion of interfaces under various nonequilibrium conditions Even with this restriction this field is huge from the more applied area combustion metallurgy to the more fundamental singularities in the complex plane solvability conditions One day at dinner time in a restaurant with a good view of the Corsica sea W Kurz from Lausanne told us about teleferique cables and the kind of material which was necessary to build them Considering the important abyss between this kind of concept and for instance the huge formalism involving Green functions used to find operating points for dendritic growth we immediately had the giggles for five minutes This large domain was the occasion to confront many scientists from different areas physicists applied mathematicians specialists of combustion metallurgists and geologists

Combustion Engines Development Günter P. Merker, Christian Schwarz, Rüdiger Teichmann, 2011-09-24 Combustion Engines Development nowadays is based on simulation not only of the transient reaction of vehicles or of the complete driveshaft but also of the highly unsteady processes in the carburation process and the combustion chamber of an engine Different physical and chemical approaches are described to show the potentials and limits of the models used for simulation

Publications du Laboratoire Jacques-Louis Lions, 2003 **Dissipative Structures and Weak Turbulence**, 2014-06-28 Dissipative Structure and Weak Turbulence provides an understanding of the emergence and evolution of structures in macroscopic systems This book discusses the emergence of dissipative structures Organized into 10 chapters this book begins with an overview of the stability of a fluid layer with potentially unstable density stratification in the field of gravity This text then explains the theoretical description of the dynamics of a given system at a formal level Other chapters consider several examples of how such simplified models can be derived complicating the picture progressively to account for other phenomena This book discusses as well the theory and experiments on plain Rayleigh Benard convection by setting first the

theoretical frame and deriving the analytical solution of the marginal stability problem The final chapter deals with building a bridge between chaos as studied in weakly confined systems and more advanced turbulence in the most conventional sense This book is a valuable resource for physicists **Annales de la faculté des sciences de Toulouse** ,1999 **Books in Series, 1876-1949** R.R.
