Dynamics Of Crowd-minds: Patterns Of Irrationality In Emotions, Beliefs And Actions Andrew Adamatzky, 2005-05-30 A crowd mind emerges when formation of a crowd causes fusion of individual minds into one collective mind Members of the crowd lose their individuality The deindividuation leads to derationalization emotional impulsive and irrational behavior self catalytic activities memory impairment perceptual distortion hyper responsiveness and distortion of traditional forms and structures This book presents unique results of computational studies on cognitive and affective space time processes in large scale collectives of abstract agents being far from mental equilibrium Computational experiments demonstrate that the irrational and nonsensical behavior of individual entities of crowd mind results in complex rich and non trivial spatio temporal dynamics of the agent collectives Mathematical methods employ theory and techniques of cellular automata and lattice swarms applied algebra theory of finite automata and Markov chains and elementary differential equations

Dynamics of Crowd-minds Andrew Adamatzky, 2005 Includes easily accessible discrete models cellular automata artificial chemistry a great number of informative illustrations enlightening quotations and an encyclopedic list of references Models and paradigms developed in the book can be applied to mathematical studies of affective collective intelligence computational models of minds near the state of mental disorder the design of massive parallel prototypes of artificial consciousness software implementations of affective cognition and the design of hardware prototypes of emotional controllers Dynamics of Crowd-minds Andrew Adamatzky, 2005

Handbook of Environmental Fluid Dynamics, Volume One Harindra Joseph Fernando, 2012-12-12 With major implications for applied physics engineering and the natural and social sciences the rapidly growing area of environmental fluid dynamics focuses on the interactions of human activities environment and fluid motion A landmark for the field the two volume Handbook of Environmental Fluid Dynamics presents the basic principles fundamental flow processes modeling techniques and measurement methods used in the study of environmental motions It also offers critical discussions of environmental sustainability related to engineering The handbook features 81 chapters written by 135 renowned researchers from around the world Covering environmental policy biological and chemical aspects it tackles important cross disciplinary topics such as sustainability ecology pollution micrometeorology and limnology Volume One Overview and Fundamentals provides a comprehensive overview of the basic principles It starts with general topics that emphasize the relevance of environmental fluid dynamics research in society public policy infrastructure quality of life security and the law It then discusses established and emerging focus areas The volume also examines the sub mesoscale flow processes and phenomena that form the building blocks of environmental motions with emphasis on turbulent motions and their role in heat momentum and species transport As communities face existential challenges posed by climate change rapid urbanization and scarcity of water and energy the study of environmental fluid dynamics becomes increasingly relevant This volume is a valuable resource for students researchers and policymakers

Multiscale Modeling of Pedestrian Dynamics Emiliano Cristiani, Benedetto Piccoli, Andrea Tosin, 2014-09-12 This book presents mathematical models and numerical simulations of crowd dynamics The core topic is the development of a new multiscale paradigm which bridges the microscopic and macroscopic scales taking the most from each of them for capturing the relevant clues of complexity of crowds The background idea is indeed that most of the complex trends exhibited by crowds are due to an intrinsic interplay between individual and collective behaviors The modeling approach promoted in this book pursues actively this intuition and profits from it for designing general mathematical structures susceptible of application also in fields different from the inspiring original one The book considers also the two most traditional points of view the microscopic one in which pedestrians are tracked individually and the macroscopic one in which pedestrians are assimilated to a continuum Selected existing models are critically analyzed The work is addressed to researchers and graduate students
