Demystifying Switched Capacitor Circuits Mingliang (Michael) Liu, 2006-06-12 This book helps engineers to grasp fundamental theories and design principles by presenting physical and intuitive explanations of switched capacitor circuits. Numerous circuit examples are discussed and the author emphasizes the most important and fundamental principles involved in implementing state of the art switched capacitor circuits for analog signal processing and power management applications. Throughout the book the author presents numerous step by step tutorials and gives practical design examples. While some quantitative analysis is necessary to understand underlying concepts, tedious mathematical equations and formal proofs are avoided. An intuitive appreciation for switched capacitor circuits is achieved. Much of the existing information on contemporary switched capacitor circuit applications is in the form of applications notes and data sheets for various switched capacitor ICs. This book compiles such information in a single volume and coherently organizes and structures it. The author has his own website at www.mingliangliu.com. Step by step tutorials which emphasize the most fundamental principals of switched capacitor circuits. Few tedious mathematical equations. The first easy to understand compilation on this subject most information available is not very cohesive.

Demystifying Large Language Models James Chen, 2024-04-25 This book is a comprehensive guide aiming to demystify the world of transformers, the architecture that powers Large Language Models (LLMs) like GPT and BERT. From PyTorch basics and mathematical foundations to implementing a Transformer from scratch, you'll gain a deep understanding of the inner workings of these models. That's just the beginning. Get ready to dive into the realm of pre-training your own Transformer from scratch, unlocking the power of transfer learning to fine-tune LLMs for your specific use cases, exploring advanced techniques like PEFT (Prompting for Efficient Fine Tuning) and LoRA (Low Rank Adaptation) for fine-tuning, as well as RLHF (Reinforcement Learning with Human Feedback) for detoxifying LLMs to make them aligned with human values and ethical norms. Step into the deployment of LLMs, delivering these state of the art language models into the real world, whether integrating them into cloud platforms or optimizing them for edge devices. This section ensures you're equipped with the know-how to bring your AI solutions to life. Whether you're a seasoned AI practitioner, a data scientist, or a curious developer eager to advance your knowledge on the powerful LLMs, this book is your ultimate guide to mastering these cutting-edge models. By translating convoluted concepts into understandable explanations and offering a practical, hands-on approach, this treasure trove of knowledge is invaluable to both aspiring beginners and seasoned professionals.

Demystifying Human Action Recognition in Deep Learning with Space-Time Feature

Descriptors Mike Nkongolo,2018-02-21 Research Paper postgraduate from the year 2018 in the subject Computer Science Internet New Technologies course Machine Learning language English abstract Human Action Recognition is the task of recognizing a set of actions being performed in a video sequence Reliably and efficiently detecting and identifying actions in video could have vast impacts in the surveillance security healthcare and entertainment spaces The problem addressed in this paper is to explore different engineered spatial and temporal image and video features and combinations thereof for the

purposes of Human Action Recognition as well as explore different Deep Learning architectures for non engineered features and classification that may be used in tandem with the handcrafted features Further comparisons between the different combinations of features will be made and the best most discriminative feature set will be identified In the paper the development and implementation of a robust framework for Human Action Recognition was proposed The motivation behind the proposed research is firstly the high effectiveness of gradient based features as descriptors such as HOG HOF and N Jets for video based human action recognition They are capable of capturing both the salient spatial and temporal information in the video sequences while removing much of the redundant information that is not pertinent to the action Combining these features in a hierarchical fashion further increases performance
