Engineering Education: A Status Report on the CAD/CAM Revolution

How complete is the effort to integrate computer graphics and CAD/CAM into engineering education? What directions is the effort taking? Are they optimal? Satisfactory?

Larry G. Richards
University of Virginia

ost American colleges and universities are struggling to catch up with developments in computer-aided design and manufacturing. The major research and development initiatives in these areas have occurred in industry and government. The earliest CAD/CAM programs were developed in the aerospace (Boeing, Lockheed), automotive (General Motors), and electronics industries. The United States government supported large cooperative efforts such as ICAM, IPAD, and F-CAM. A coalition of industries has supported research and development through Computer-Aided Manufacturing—International (CAM-I). The recent proliferation of CAD/CAM systems and the rapid developments in information and automation technologies have revolutionized industry and significantly changed the role of the engineer in design and manufacturing.

However, our colleges and universities are not currently able to prepare our graduates adequately for the world of advanced industrial automation. This is so for several reasons: (1) We do not have the equipment and resources appropriate to modern industry; (2) our faculty lack necessary skills in the computer and automation areas; and (3) there are few good texts or timely reference materials available. These symptoms are manifestations of two basic underlying problems: Few schools foresaw the speed and scope of developments in CAD/CAM and their tremendous significance to industry, and most schools have limited budgets, which preclude acquiring industrial grade equipment (at least at the usual prices) and hiring faculty trained in these areas (especially in competition with industry salaries).

Despite these problems the beginnings of an adequate educational program in CAD/CAM are starting to emerge. Several individual schools have made great strides toward integrating CAD/CAM into their curricula, and various cooperative approaches to curriculum and materials development have been undertaken.

   Advances in CAD/CAM Workstations P.C.C. Wang,2012-12-06 To understand what we know and be aware of what is to be known is a necessary approach to treating CAD CAM issues The challenge for all of us interested in CAD CAM and engineering data handling is to under stand what we know and what we need to know about today s and tomorrow s technology to track the explosive development of our field and its broadening range of applications to sort through the details which compete for our attention and to perceive underlying trends A key development in the past year was the rapid and widespread acceptance by all user segments of personal computer based CAD CAM workstations coupled with widespread use of software packages both those developed for PC based workstations and others converted from main frame and mini systems for use on PC based or 32 bit workstations If this trend continues for a few more years as much as 900 0 of all design work may be accomplished on advanced versions of PC based workstations Many software systems vendors unknown until recently to the PC based CAD CAM community have now come to dominate the market companies such as Autodesk Chessell Robocom Future Net T W Systems P CAD Cascade 4 D Graphics CADAM Wang Hornbuckle and more than 20 other companies who sell PC based CAD CAM software   *3D Bioprinting* Jeremy M.
