*Whole Organ Approaches to Cellular Metabolism* James Bassingthwaite, Carl A. Goresky, John H. Linehan, 2012-12-06 The field of capillary tissue exchange physiology has been galvanized twice in the past 25 years A 1969 conference at the National Academy of Sciences in Copenhagen resulted in the book Capillary Permeability The Transfer of Molecules and Ions Between the Capillary Blood and the Tissue Crone and Lassen 1970 It focused on the physiochemical aspects of transcapillary water and solute transport The field has matured considerably since This volume was designed as the successor to the 1970 book and was created at a gathering of the authors at McGill University It too captures the breadth of a field that has been dramatically enriched by numerous technical and conceptual advances In 1970 it was already known that the capillary wall was not merely a cellophane bag exerting steric hindrances on solute particles Instead the endothelial surface was recognized as the site of binding reactions and permeation by passive or carrier mediated transport Furthermore the cells of the blood could traverse evanescent wide openings in the zippered clefts Today research priorities have turned more to cell cell interactions toward understanding the utility of the gap junctional connections between endothelial cells and neighboring smooth muscle cells neuronal twigs and

Fiskum,2013-04-17 A widespread appreciation for the role that calcium plays in cell physiology and patho physiology has now been achieved due to the pioneering studies of many of the scientists who attended the VIIth International Spring Symposium on Health Sciences at George Washington University in Washington D C The participants in this unique meeting represented diverse fields of basic and clinical research such as molecular physiology oncology molecular genetics cardiology bioenergetics pathology and endocrinology The content of the proceedings of the symposium represents work in these and other areas of biomedical research Organization of the book is aimed at striking a balance between the biochemistry and physiology of normal cell Ca metabolism and the pathological consequences of alterations in cell Ca homeostasis The first section of the book is devoted to the transport mechanisms responsible for regulating intracellular Ca and the pharmacological modalities for controlling cell Ca Particular attention is given to the molecular basis for plasma membrane transport activities including the ATP driven Ca pump the Na Ca exchange system and voltage sensitive Ca channels The second section covers the exciting relationships between phosphoinositide metabolism signal transduction and cell Ca metabolism This section begins with an eloquent overview by Professor Michael Berridge who was the keynote speaker at the symposium and the recipient of the scientific merit award      **Combined Subject and Author Indexes to Radiobiology**
