

Different Effects of Calcium

- In the extracellular compartment,
 - calcium is vital for blood clotting
 - calcium may act in a hormone-like way as an extracellular regulator of a variety of cellular responses through stimulation of membrane calcium receptors
- basic mineral of bones and teeth
- Its concentration in extracellular fluid must be maintained within narrow limits
- Deviations in either direction are not readily tolerated and, if severe, may be life-threatening

Klee, 1999 Encompassing all aspects of calcium signalling from methods of measuring calcium in cells to the molecular mechanisms for decoding its information this comprehensive book balances historical aspects and state of the art developments

Cell Regulation by Intracellular Signals Stephane Swillens, 2013-11-21 In 1980 the IVth International Cyclic Nucleotide Conference was held in Brussels As this meeting attracted many investigators involved in cyclic nucleotides and calcium role in intracellular regulation it was thought that this opportunity could be used to organize prior to the Congress an in depth introductory course on the subject This was carried out as a NATO Advanced Study Institute The participants included Ph D students and M D s engaged in a research training but also fully trained and well known researchers who wanted a refresher course on the whole subject During the course most of the participants and lecturers asked to be provided with a text summarizing the basic lectures of the course This book was therefore conceived as a basic textbook on the regulation and action of intracellular signal molecules concentrating mainly on cyclic nucleotides and calcium It was deliberately kept at a basic level We would therefore be happy if it could be used as an introduction for interested M D s or Ph D s working in other fields or entering this field and as a general refresher for researchers interested in the subject For this reason very general schemes have been asked of the authors along with reading lists of available reviews rather than extensive bibliographies The editors should like to thank the NATO Scientific Affairs Committee for having supported the course and Mrs Gh Wilmes who prepared the manuscripts S SWILLENS J E

Current Topics in Cellular Regulation Bernard L. Horecker, Earl R. Stadtman, P. Boon Chock, 2014-06-28 Current Topics in Cellular Regulation Volume 31 is a collection of papers that deals with the role of calcium as intracellular messenger calcium release or entry across the plasma membrane calcium in neurotransmitter release and the regulation of free calmodulin levels in neurons by neuromodulin Other papers discuss the calcium calmodulin dependent protein kinase II the regulation of muscular calcium channels and the Na Ca²⁺ exchangers One paper describes the mechanisms of intracellular calcium release or entry in which agonists acting through the phosphoinositide system or possibly by metabolites or secondary messenger system can regulate the mechanisms of cellular Ca²⁺ Another paper describes different approaches in evaluating the possible mechanisms of calcium in neurotransmitter release The paper notes that imaging techniques can be used in the timing and order of events in the release process Possible identification by the investigator of specific releasing regions at the membranes such as active zones can also define more precisely the exact localization of the process One paper discusses the interaction between released calmodulin and cytoskeleton proteins that can affect polymerization and cross linking of cytoskeleton polymers that leads to filopodia formation or extension The collection will prove beneficial to molecular biologists general biologists microbiologists biochemists and researchers involved in cellular biology
