Calcium Clean Steel Tohei Ototani,1986 *Calcium Clean Steel* T. Ototani,1986-09-01 In contemporary materials technology some areas are considered particularly exciting the new materials like ceramics and amorphous metals revolutionary procedures to fabricate or to analyze materials in short everything which is now commonly labelled high tech It should be kept in mind however that also in the foreseeable future basic materials such as steel light alloys or concrete will constitute the solid backbone of engineering and building Science and technology of these traditional materials is characterized by a dynamic evolution aiming at higher quality and reliability at lower production costs and at continuous adaptation to advanced production technologies Progress in this technical evolution is closely linked to the application of scientific fundamentals This book by T Ototani presents an excellent example for this important area of development The process metallurgy of steel being a complex sequence of reactions like reduction decarburization deoxidation desulphurization alloying etc is to be regarded as a system of operations designed to produce a high quality steel with well defined properties in very large amounts with a maximum of technical and economic efficiency The text written by a well known Japanese expert presents insight into the chemistry of the application of calcium for the production of clean steel into the thermodynamic equilibria involved the kinetics of dissolution and reaction the formation morphology and separation of inclusions and the technological properties of the steels obtained by this method Information Sources in Metallic Materials M. Materials Testing for the Metal Forming Industry Klaus Pöhlandt,2012-12-06 This book is addressed to both research scientists at universities and technical institutes and to engineers in the metal forming industry It is based upon the author s experience as head of the Materials Science Department of the Institut für Umformtechnik at the University of Stuttgart The book deals with materials testing for the special demands of the metal forming industry The general methods of materials testing as far as they are not directly related to metal forming are not considered in detail since many books are available on this subject Emphasis is put on the determination of processing properties of metallic materials in metal forming i e the forming behavior This includes the evaluation of stress strain curves by tensile up setting or torsion tests as well as determining the limits of formability Among these subjects special emphasis has been laid upon recent developments in the field of compression and torsion testing The transferability of test results is discussed Some testing methods for the functional properties of workpieces in the final state after metal forming are described Finally methods of testing tool materials for bulk metal forming are treated Testing methods for surface properties and tribological parameters have not been included The emphasis is put on the deformation of the specimens Problems related to the testing machines and measuring techniques as well as the use of computers are only considered in very few cases deemed necessary Process Modelling of Metal Forming and Thermomechanical Treatment Claudio R. Boer,Nuno M.R.S. Rebelo,Hans A.B.

Rydstad, Günther Schröder, 2012-12-06 It is the objective of the series *Materials Research and Engineering* to publish information on technical facts and processes together with specific scientific models and theories Fundamental considerations assist in the recognition of the origin of properties and the roots of processes By providing a higher level of understanding such considerations form the basis for further improving the quality of both traditional and future engineering materials as well as the efficiency of industrial operations In a more general sense theory helps to integrate facts into a framework which ties relations between physical equilibria and mechanisms on the one hand product development and economical competition on the other Aspects of environmental compatibility conservation of resources and of socio cultural interaction form the final horizon a subject treated in the first volume of this series *Materials in World Perspective* The four authors of the present book endeavor to present a comprehensive picture of process modelling in the important field of metal forming and thermomechanical treatment The reader will be introduced to the rapidly growing new field of application of computer aided numerical methods to the quantitative simulation of complex technical processes Extensive use is made of the state of scientific knowledge related to materials behavior under mechanical stress and thermal treatment *Iron & Steelmaker*, 2003-07 *Technical Book Review Index*, 1987 **Metallographic Investigations of Corrosion, Deformation and Fracture of Engineering Materials** International Metallographic Society.
