Calculated Risk:

Calculated Risks Gerd Gigerenzer, 2002 At the beginning of the twentieth century H G Wells predicted that statistical thinking would be as necessary for citizenship in a technological world as the ability to read and write But in the twenty first century we are often overwhelmed by a baffling array of percentages and probabilities as we try to navigate in a world dominated by statistics Cognitive scientist Gerd Gigerenzer says that because we haven't learned statistical thinking we don't understand risk and uncertainty In order to assess risk everything from the risk of an automobile accident to the certainty or uncertainty of some common medical screening tests we need a basic understanding of statistics Astonishingly doctors and lawyers don't understand risk any better than anyone else Gigerenzer reports a study in which doctors were told the results of breast cancer screenings and then were asked to explain the risks of contracting breast cancer to a woman who received a positive result from a screening The actual risk was small because the test gives many false positives But nearly every physician in the study overstated the risk Yet many people will have to make important health decisions based on such information and the interpretation of that information by their doctors Gigerenzer explains that a major obstacle to our understanding of numbers is that we live with an illusion of certainty Many of us believe that HIV tests DNA fingerprinting and the growing number of genetic tests are absolutely certain But even DNA evidence can produce spurious matches We cling to our illusion of certainty because the medical industry insurance companies investment advisers and election campaigns have become purveyors of certainty marketing it like a commodity To avoid confusion says Gigerenzer we should rely on more understandable representations of risk such as absolute risks For example it is said that a mammography screening reduces the risk of breast cancer by 25 percent But in absolute risks that means that out of every 1 000 women who do not participate in screening 4 will die while out of 1 000 women who do 3 will die A 25 percent risk reduction sounds much more significant than a benefit that 1 out of 1 000 women will reap This eye opening book explains how we can overcome our ignorance of numbers and better understand the risks we may be taking with our money our health and our lives

new archival research a riveting history that reads like a thriller On January 28 1986 just seventy three seconds into flight the space shuttle Challenger broke apart over the Atlantic Ocean killing all seven people on board Millions of Americans witnessed the tragic deaths of the crew which included New Hampshire schoolteacher Christa McAuliffe Like the assassination of JFK the Challenger disaster is a defining moment in 20th century history one that forever changed the way America thought of itself and its optimistic view of the future Yet the full story of what happened and why has never been told Based on extensive archival research and meticulous original reporting Challenger A True Story of Heroism and Disaster on the Edge of Space follows a handful of central protagonists including each of the seven members of the doomed crew through the years leading up to the accident and offers a detailed account of the tragedy itself and the investigation afterward It's a compelling tale of ambition and ingenuity undermined by political cynicism and cost cutting in the interests of burnishing national prestige of hubris and heroism and of an investigation driven by leakers and whistleblowers determined to bring the truth to light Throughout there are the ominous warning signs of a tragedy to come recognized but then ignored and later hidden from the public Higginbotham reveals the history of the shuttle program and the lives of men and women whose stories have been overshadowed by the disaster as well as the designers engineers and test pilots who struggled against the odds to get the first shuttle into space A masterful blend of riveting human drama and fascinating and absorbing science Challenger identifies a turning point in history and brings to life an even more complex and astonishing story than we remember *Safety Digest* United States. Clark, 2024-05-01 The World War II campaign of the Mediterranean Theatre the soft underbelly of the Axis as Churchill so wrongly called it was compounded of elements reminiscent of the heyday of the Foreign Legion intrigue suspense a secret mission to a secret seaside villa in Algeria the strange but necessary alliance with Darlan and then the bloody muddy and most unexpectedly long and difficult Italian campaign where the roster of troops sounded like the roll call of the allied nations These are elements to make any book interesting and if past history still exciting and General Clark has capitalized fully on them There are sketches of Churchill of Eisenhower in his difficult coordinating position of the war's lesser known heroes the officers and enlisted men of the battle command Clark wanted and finally received And there is the series of almost fatal blunders which followed the taking of Rome when the Western Allies seemed almost determined to play into the hands of the Russians Tito might have left the Kremlin's orbit sooner and the present list of satellite nations might have been smaller And when Clark was made American high commissioner of Austria he experienced more of the same lack of foresight and he concludes with a political sophistication not common to the military We celebrated a victory when in reality we had not won the War Honest forceful colorful this is one of the best books to come from World War II's top brass Kirkus

Calculated Risk deals in large part with events and situations in which General Clark and I were not only close associates but friends and comrades But even if I am therefore a prejudiced witness I cheerfully and unhesitatingly prophesy that thousands will find the book as accurate and as completely absorbing as I did Dwight D Eisenhower F orthright hard hitting stuff This book should be widely read A high powered high tempered man afraid of nothing and no man Clark was consistently given tough assignments His superiors always seem to have had complete confidence in his ability to carry out these assignments and always gave him their full moral support The whole Mediterranean Campaign he says was a calculated risk The North African Campaign was an extremely perilous military adventure Aside from possible French and probable German resistance in North Africa there was always the threat of Spanish or German attack via Spanish Morocco on our extended lines of communication an attack which might well have been fatal a fascinating book Richard E Danielson *The Atlantic* Records & Briefs New York State Appellate Division, 1960
