## Calculus Volume 2 Calculus Of Several Variab:

**Commutative Algebra, Volume II** Oscar Zariski, Pierre Samuel, 2019-11-13 The second text in this two book series extends the classical material of Volume I which focuses on field theory and the ideal theory of Noetherian rings and Dedekind domains The connection of Volume II s material to algebraic geometry is stressed throughout the presentation making this book a practical introduction to some basic concepts and the arithmetical foundations of algebraic geometry The opening chapter deals with properties of places and is followed by a chapter that explores the classical properties of polynomial and power series rings and their applications to algebraic geometry The final chapter examines the theory of local rings which provides the algebraic basis for the local study of algebraic and analytical varieties Several helpful Appendixes conclude the text

*Functions Of Several Real Variables* Martin Moskowitz, Fotios C Paliogiannis, 2011-04-29 This book begins with the basics of the geometry and topology of Euclidean space and continues with the main topics in the theory of functions of several real variables including limits continuity differentiation and integration All topics and in particular differentiation and integration are treated in depth and with mathematical rigor The classical theorems of differentiation and integration such as the Inverse and Implicit Function theorems Lagrange s multiplier rule Fubini s theorem the change of variables formula Green s Stokes and Gauss theorems are proved in detail and many of them with novel proofs The authors develop the theory in a logical sequence building one result upon the other enriching the development with numerous explanatory remarks and historical footnotes A number of well chosen illustrative examples and counter examples clarify matters and teach the reader how to apply these results and solve problems in mathematics the other sciences and economics Each of the chapters concludes with groups of exercises and problems many of them with detailed solutions while others with hints or final answers More advanced topics such as Morse s lemma Sard s theorem the Weierstrass approximation theorem the Fourier transform Vector fields on spheres Brouwer s fixed point theorem Whitney s embedding theorem Picard s theorem and Hermite polynomials are discussed in starred sections
