**c-Myc Function in Neoplasia** C.V. Dang, Linda A. Lee, 2013-11-21 1 1 SCOPE OF BOOK n explosion of novel findings in the past decade has contributed to the great progress toward understanding the biology of human cancers Much of this progress can be attributed to our ability to dissect many biological processes at the molecular level Most spectacular is the technology of molecular biology that allows identification and characterization of genes that participate in the genesis of human cancers Three major groups of genes appear to play out the drama of cancer development tumor suppressor genes mismatch repair genes and oncogenes The tumor suppressor genes 1 encode products that are inhibitory to cell proliferation The loss of these inhibitors by mutation or deletion can unleash cells from their restraints to proliferate Mutations in the mismatch repair 2 10 genes also have been implicated in tumorigenesis The inability of cells to repair spontaneously occurring mutations leads to genomic instability and could potentially result in the accumulation of carcinogenic DNA lesions Finally activation of proto oncogenes which are normal cellular genes into oncogenes could accelerate the 11 processes of cell proliferation c myc was one of the very first proto oncogenes to be identified and because it normally plays pivotal roles in both cell proliferation and cell death has enticed many to investigate the molecular mechanisms by which it transforms cells

**C-Myc Function in Neoplasia** Chi V. Dang, Linda A. Lee, 1995 Mechanisms in B-Cell Neoplasia 1994 Michael Potter, Fritz Melchers, 2012-12-06 The 12th Workshop on Mechanisms in B Cell Neoplasia continues this series of meetings on intriguing new developments in human and experimental B cell tumors The integration of knowledge from basic B cell biology to the clinical problems of multiple myelomas follicular lymphoma mantle cell lymphoma and B CLL present the challenges that were discussed in the meeting The discussion focusses on Cellular components of the myeloma clone Genomic instability in B cells and B cell tumors The CD5 antigen and B1 cells Regulation of cell cycle and apoptosis Role of IL 6 BCL 2 BCL 1 myc in B cell development **Genetics of Human Neoplasia, Part A** R.S. Verma, 1995-09-25 The underlying idea that cancer is a genetic disease at the cellular level was postulated over 75 years ago when Boveri hypothesised that the malignant cell was one that had obtained an abnormal chromatin content However it has been only the last decade where enormous strides have been made toward understanding neoplastic development Explosive growth in the discipline of cancer genetics is so rapid that any attempt to review this subject becomes rapidly outdated and continuous revisions are warranted Conclusive evidence has been reached associating specific chromosomal abnormalities to various cancers We have just begun to characterise the genes which are involved in these consistent chromosomal rearrangements resulting in the elucidation of the mechanisms of neoplastic transformation at a molecular level The identification of over 50 oncogenes has led to a better understanding of the physiological process Tumor suppresser genes which were discovered through inheritance mechanisms have further shed some light towards understanding the loss of heterozygosity during carcinogenesis The message emerging with increasing clarity concerning specific pathways which regulate the fundamental

process of cell division and uncontrolled growth The advances in molecular biology have led to a major insight in establishing precise diagnosis and treatment of many cancers resulting in prevention of death The field is expanding so rapidly that a complete account of all aspects of genetics of cancer could not be accommodated within the scope of a single volume format Nevertheless a few very specific topics have been chosen which readers may find of great interest in hopes that their interest may be rejuvenated concerning the bewildering nature of this deadly disease The contributors to Volume 3 have provided up to date accounts of their fields of expertise Although the contributors have kept their chapters brief they include an extensive bibliography for those who wish to understand a particular topic in depth For more than a century cancer has been diagnosed on the enigmatic basis of morphological features Establishing a diagnosis based on DNA RNA and proteins which is done routinely now was once inconceivable Cloning a gene of hematopoietic origin is no longer a fantasy The approach has shifted over the past 15 years from identification of chromosomal abnormalities toward zeroing in on cancer genes

**Mechanisms in B-Cell Neoplasia** Fritz Melchers, Michael Potter, 2012-12-06 *Small-molecule Transcription Factor Inhibitors in Oncology* Khondaker Miraz Rahman, David Thurston, 2018-09-05 Oncogenic transcription factors are an increasingly important target for anticancer therapies Inhibiting these transcription factors could allow tumour cells to be reprogrammed leading to apoptosis or differentiation from the malignant phenotype As the use of kinase inhibitors is gradually declining transcription factor inhibition is the next hot topic for oncology research and merits much attention This book highlights recent progress in the development of small molecule inhibitors of oncogenic transcription factors It also presents the evidence that this important protein class can be modulated in a number of ways to develop novel classes of therapeutic agents The broad range of aspects covered by the book is noteworthy and renders it enormously valuable This title serves as a unique reference book for postgraduates academic researchers and practitioners working in the fields of biochemistry biotechnology cell and molecular biology and bio inorganic chemistry **Biomedical Index to PHS-supported Research**, 1995 Biomedical Index to PHS-supported Research: pt. A. Subject access A-H, 1992

Fuzziness Monika Fuxreiter, Peter Tompa, 2012-03-07 Detailed characterization of fuzzy interactions will be of central importance for understanding the diverse biological functions of intrinsically disordered proteins in complex eukaryotic signaling networks In this volume Peter Tompa and Monika Fuxreiter have assembled a series of papers that address the issue of fuzziness in molecular interactions These papers provide a broad overview of the phenomenon of fuzziness and provide compelling examples of the central role played by fuzzy interactions in regulation of cellular signaling processes and in viral infectivity These contributions summarize the current state of knowledge in this new field and will undoubtedly stimulate future research that will further advance our understanding of fuzziness and its role in biomolecular interactions

**Journal of the National Cancer Institute**, 1990 *C-Myc in B-Cell Neoplasia* Michael Potter, Fritz Melchers, 2012-12-06 The papers in this book were presented at the 14th Mechanisms in B cell Neoplasia meeting that was

held in Bethesda Maryland October 21 23 1996 In 1995 the organizers decided that the format of the meeting would be changed and that specific topics relevant to B cell neoplasia would be discussed This year s topic is on the c myc oncogene in B cell neoplasia which has been discussed in virtually every previous meeting Some of the presentations announced for the first time dramatic advances in our understanding of c myc and because this subject has become highly complex it was thought that devoting the whole meeting to this theme would be appropriate The book therefore represents a review of many aspects of the myc problem but by no means is truly comprehensive In a recent Medline search there were 8 505 references to myc fully illustrating the magnitude of the interest and depth of this field The organizers of the meeting have each contributed review chapters that summarize different aspects of the meeting We thank the National Cancer Institute for sponsoring this workshop and the staff of Cygnus Inc for their outstanding organizational assistance The organizers are most grateful to Vickie Rogers for assembling the book and dealing with the editorialization of the manuscripts MICHAEL POTTER FRITZ MELCHERS Table of Contents M POTTER and K B MARCU The c myc Story Where We ve Been Where We Seem to be Going With 2 Figures I F      **Mechanisms in B-cell Neoplasia 1990** Michael Potter,Fritz Melchers,1990      *Retroviruses* John M. Coffin,Stephen H.
