Calculus Applications S G:

Mathematical Analysis and Applications Themistocles M. Rassias, Panos M. Pardalos, 2019-12-12 An international community of experts scientists comprise the research and survey contributions in this volume which covers a broad spectrum of areas in which analysis plays a central role Contributions discuss theory and problems in real and complex analysis functional analysis approximation theory operator theory analytic inequalities the Radon transform nonlinear analysis and various applications of interdisciplinary research some are also devoted to specific applications such as the three body problem finite element analysis in fluid mechanics algorithms for difference of monotone operators a vibrational approach to a financial problem and more This volume is useful to graduate students and researchers working in mathematics physics engineering and economics

Fractal Analysis Fernando Brambila, 2017-06-14 Fractal analysis has entered a new era The applications to different areas of knowledge have been surprising Let us begin with the fractional calculus fractal geometry relationship which allows for modeling with extreme precision of phenomena such as diffusion in porous media with fractional partial differential equations in fractal objects Where the order of the equation is the same as the fractal dimension this allows us to make calculations with enormous precision in diffusion phenomena particularly in the oil industry for new spillage prevention Main applications to industry design of fractal antennas to receive all frequencies and that is used in all cell phones spacecraft radars image processing measure porosity turbulence scattering theory Benoit Mandelbrot creator of fractal geometry would have been surprised by the use of fractal analysis presented in this book Part I Petroleum Industry and Numerical Analysis Part II Fractal Antennas Spacecraft Radars Image Processing and Measure and Part III Scattering Theory Porosity and Turbulence It is impossible to picture today's research without fractal analysis

Approximation Theory George A. Anastassiou, Sorin G. Gal, 2012-12-06 We study in Part I of this monograph the computational aspect of almost all moduli of continuity over wide classes of functions exploiting some of their convexity properties To our knowledge it is the first time the entire calculus of moduli of smoothness has been included in a book We then present numerous applications of Approximation Theory giving exact values of errors in explicit forms The K functional method is systematically avoided since it produces nonexplicit constants All other related books so far have allocated very little space to the computational aspect of moduli of smoothness In Part II we study examine the Global Smoothness Preservation Property GSPP for almost all known linear approximation operators of approximation theory including trigonometric operators and algebraic interpolation operators of Lagrange Hermite Fejer and Shepard type also operators of stochastic type convolution type wavelet type integral operators and singular integral operators etc We present also a sufficient general theory for GSPP to hold true We provide a great variety of applications of GSPP to Approximation Theory and many other fields of mathematics such as Functional analysis and outside of mathematics fields such as computer aided geometric design CAGD Most of the time GSPP methods are optimal Various moduli of smoothness are intensively involved

in Part II Therefore methods from Part I can be used to calculate exactly the error of global smoothness preservation It is the first time in the literature that a book has studied GSPP Singapore Teachers: Narratives Of Care, Hope And Commitment Yanping Fang,2016-03-15 The narratives and analysis included in this book were written by and derived from teacher participants in a post graduate course that the chief editor Dr Fang has taught at the National Institute of Education Singapore Narrative inquiry has been used in the course to help teachers and school leaders make meaning of their personal and professional growth and learning trajectory Narratives give them their own voice which leads to a deeper understanding of their work and lives and informs teacher educators researchers and policy makers on ways to better support their professional learning and development More than being a mere summary of teacher narratives the overviews of each of the six parts of the book written by the editorial team after many rounds of reading and re reading tease out patterns to usher readers into the narratives contained in each part in more informative and reflective ways The final part with two reflective essays and one research paper explores more systematically the narrative experiences of the course participants while the epilogue records the author s own journey in developing a narrative inquiry pedagogy in teacher education The book is expected to benefit future course participants and local teachers as a resource for professional development and inform researchers and policymakers who are interested in understanding the lived experiences of teachers in Singapore and creating better teacher engagement in schools Advances in Harmonic Analysis and Operator Theory Alexandre Almeida,Luís Castro, Frank-Olme Speck,2013-01-31 This volume is dedicated to Professor Stefan Samko on the occasion of his seventieth birthday The contributions display the range of his scientific interests in harmonic analysis and operator theory Particular attention is paid to fractional integrals and derivatives singular hypersingular and potential operators in variable exponent spaces pseudodifferential operators in various modern function and distribution spaces as well as related applications to mention but a few Most contributions were firstly presented in two conferences at Lisbon and Aveiro Portugal in June July 2011 Advanced Lasers Oleksiy Shulika,Igor Sukhoivanov,2015-04-28 Presenting a blend of applied and fundamental research in highly interdisciplinary subjects of rapidly developing areas this book contains contributions on the frontiers and hot topics of laser physics laser technology and laser engineering and covers a wide range of laser topics from all optical signal processing and chaotic optical communication to production of superwicking surfaces correction of extremely high power beams and generation of ultrabroadband spectra It presents both review type contributions and well researched and documented case studies and is intended for graduate students young scientist and emeritus scientist working studying in laser physics optoelectronics optics photonics and adjacent areas The book contains both experimental and theoretical studies as well as combinations of these two which is known to be a most useful and interesting form of reporting scientific results allowing students to really learn from each contribution The book contains over 130 illustrations

A Computational Model of Natural Language Communication Roland R. Hausser,2006-09-28 Everyday life would

be easier if we could simply talk with machines instead of having to program them Before such talking robots can be built however there must be a theory of how communicating with natural language works This requires not only a grammatical analysis of the language signs but also a model of the cognitive agent with interfaces for recognition and action an internal database and an algorithm for reading content in and out In Database Semantics these ingredients are used for reconstructing natural language communication as a mechanism for transferring content from the database of the speaker to the database of the hearer Part I of this book presents a high level description of an artificial agent which humans can freely communicate with in their accustomed language Part II analyzes the major constructions of natural language i e intra and extrapositional functor argument structure coordination and coreference in the speaker and the hearer mode Part III defines declarative specifications for fragments of English which are used for an implementation in Java The book provides researchers graduate students and software engineers with a functional framework for the theoretical analysis of natural language communication and for all practical applications of natural language processing
