Research and Development in University Mathematics Education Viviane Durand-Guerrier, Reinhard Hochmuth, Elena Nardi, Carl Winsløw, 2021-04-15 In the last thirty years or so the need to address the challenges of teaching and learning mathematics at university level has become increasingly appreciated by university mathematics teachers and beyond by educational institutions around the world Indeed mathematics is both a condition and an obstacle to success for students in many educational programmes vital to the 21st century knowledge society for example in pure and applied mathematics engineering natural sciences technology economics finance management and so on This breadth of impact of mathematics implies the urgency of developing research in university mathematics education and of sharing results of this research widely This book provides a bespoke opportunity for an international audience of researchers in didactics of mathematics mathematicians and any teacher or researcher with an interest in this area to be informed about state of the art developments and to heed future research agendas This book emerged from the activities of the research project INDRUM acronym for International Network for Didactic Research in University Mathematics which aims to contribute to the development of research in didactics of mathematics at all levels of tertiary education with a particular concern for the development of early career researchers in the field and for dialogue with university mathematicians The aim of the book is to provide a deep synthesis of the research field as it appears through two INDRUM conferences organised in 2016 and 2018 It is an original contribution which highlights key research perspectives addresses seminal theoretical and methodological issues and reports substantial results concerning the teaching and learning of mathematics at university level including the teaching and learning of specific topics in advanced mathematics across a wide range of university programmes

College Algebra and Trigonometry Revathi Narasimhan, 2009 Providing a functions based approach this title explains the fundamentals of college algebra and trigonometry for those studying calculus or quantitative methods courses or for students continuing on to the traditional calculus sequence

Research in Collegiate Mathematics Education Ed Dubinsky, Alan H. Schoenfeld, James J. Kaput, 1994 The field of research in collegiate mathematics education has grown rapidly over the past twenty five years Many people are convinced that improvement in mathematics education can only come with a greater understanding of what is involved when a student tries to learn mathematics and how pedagogy can be more directly related to the learning process Today there is a substantial body of work and a growing group of researchers addressing both basic and applied issues of mathematics education at the collegiate level This volume is testimony to the growth of the field The intention is to publish volumes on this topic annually doing more or less as the level of growth dictates The introductory articles survey papers and current research that appear in this first issue convey some aspects of the state of the art The book is aimed at researchers in collegiate mathematics education and teachers of college level mathematics courses who may

find ideas and results that are useful to them in their practice of teaching as well as the wider community of scholars interested in the intellectual issues raised by the problem of learning mathematics **Geometry** Ron Larson,1995

Precalculus Revathi Narasimhan,2016 Incorporating the Human Element in Online Teaching and Learning Gray, Laura E.,Dunn, Shernette D.,2024-03-25 The rapid shift to online learning accelerated by the challenges of the COVID 19 pandemic has brought both convenience and unforeseen hurdles Despite the appeal of flexible education the attrition rates in online courses remain persistently higher than in traditional face to face counterparts This escalating issue impacts individual students and threatens the stability of entire learning institutions The imminent need for a comprehensive solution to address the root causes of high attrition rates has never been more critical Incorporating the Human Element in Online Teaching and Learning meticulously crafted for college professors researchers graduate students policymakers instructional designers and college administrators provides a comprehensive roadmap for mitigating the attrition crisis in online education The book equips educators with culturally responsive pedagogical practices by addressing the critical need for humanistic engagement in online courses ensuring that online learning spaces become more inclusive and supportive As a result the strategies outlined in this book empower educators to create a sense of belonging for diverse student populations and offer a blueprint for colleges and universities to foster professional development opportunities Ultimately this transformative guide is a cornerstone in reshaping the online learning experience ensuring that every student regardless of background can thrive in the digital classroom **Research in Collegiate Mathematics Education IV** Ed Dubinsky,2000 This fourth volume of Research in Collegiate Mathematics Education RCME IV reflects the themes of student learning and calculus Included are overviews of calculus reform in France and in the U S and large scale and small scale longitudinal comparisons of students enrolled in first year reform courses and in traditional courses The work continues with detailed studies relating students understanding of calculus and associated topics Direct focus is then placed on instruction and student comprehension of courses other than calculus namely abstract algebra and number theory The volume concludes with a study of a concept that overlaps the areas of focus quantifiers The book clearly reflects the trend towards a growing community of researchers who systematically gather and distill data regarding collegiate mathematics teaching and learning This series is published in cooperation with the Mathematical Association of America Alternative Strategies for Evaluating Student Learning Michelle V. Achacoso,Marilla D. Svinicki,2005-03-17 Although new forms of learning call for new forms of assessment many faculty struggle to find different ways of testing their students achievements This issue introduces readers to both theory and practical examples of innovations in assessment in the college classroom Examples include authentic testing testing with multimedia portfolios visual synthesis and performance based testing among others Contributors also argue that student performance on exams can be improved by techniques that can be implemented both before and after the exam to make the students better learners This is the 100th volume of the Jossey Bass quarterly report series New Directions for Teaching and
