Establishing a Performance Index for Construction Project Managers Virendra Kumar Paul, Sushil Kumar Solanki, Abhijit Rastogi, Parnika Singh Yadav, 2023-03-07 Assessment of professional competence for project managers and the measure of project success is well trodden ground in the research and professional project management literature. Whilst standards and certifications like PMBOK and the IPMA competence baseline have been developed as a guide for the development of project managers' competence, the manifestation of these competencies into good performance is neither guaranteed nor always easily ascertainable. This book presents a brand new comprehensive and reliable quantitative tool to assess the performance of a construction project manager. Though the performance of a project construction manager may be judged on time and cost criteria of a project, there is still no one conclusive evaluation tool based on the varied criteria or competencies that are usually ascribed to them. This book develops a performance index for construction project professionals which can be indicative of their performance measured over varied attributes over the lifetime of their professional development. This index has the potential to provide all project stakeholders with better control over selecting appropriate resources for managing projects and drive the project professional from within towards improving his/her credentials with every project. This book can be used by aspiring and practising project managers for measuring their own performance and assessing their relative strengths and weaknesses. Organizations can use the tool as a benchmark to select the best of their human resources for their projects and training institutions can use the tool to set a baseline, highlight areas for intervention and indicate the readiness of trainees to face real world projects. *Proceedings of the 1987 IEEE International Conference on Systems, Man, and Cybernetics, October 20-23, 1987, Radisson Mark Plaza Hotel, Alexandria, Virginia* ,1987 **The Home in the Digital Age** Antonio Argandoña, Joy Malala, Richard Peatfield, 2021-05-30 The Home in the Digital Age is a set of multidisciplinary studies exploring the impact of digital technologies in the home with a shift of emphasis from technology to the people living and using this in their homes. The book covers a wide variety of topics on the design, introduction and use of digital technologies in the home, combining the technological dimension with the cognitive, emotional, cultural and symbolic dimensions of the objects that incorporate digital technologies and project them onto people's lives. It offers a coherent approach to the home which gives unity to the discussion. Scholars of the home, the house and the family will find here the connection with the problems derived from the use of domestic robots and connected devices. Students of artificial intelligence, machine learning, robotics, big data and other branches of digital technologies will find ideas and arguments to apply their disciplines to the home and participate fruitfully in forums where digital technologies are built and negotiated in the home. Experts from various disciplines: psychologists and sociologists, philosophers, epistemologists and ethicists, economists, engineers, architects, urban planners and designers and so on, and also those interested in developing

policies for the home and family will find this book contains well founded and useful ideas to focus their work
