**Current Topics in Nonclinical Drug Development** Philip Bentley, Pritam S. Sahota, Zbigniew Wojcinski, 2023-11-09

The second volume in the CURRENT TOPICS IN NONCLINICAL DRUG DEVELOPMENT SERIES explores the critical issues and current topics in nonclinical drug development. This second volume covers individual topics and strategies in drug development from compound characterization to drug registration. Written by a variety of experts in the field, recent and rapid advances in technologies and associated changes in regulatory guidance are discussed. Select topics include Evolution of Artificial Intelligence AI technologies and the impact on toxicologic pathology. Current approaches to carcinogenicity testing. Predicting drug-drug interactions. Current understanding of idiosyncratic drug reaction. Assessing cardiovascular risks beyond QT interval. Use of 3D cell cultures in toxicology and ADME. Development of small molecule antibody complexes. Differentiating adverse from non-adverse findings in nonclinical studies. Current Topics in Nonclinical Drug Development Volume 2 will aid toxicologists, toxicologic pathologists, consultants, regulators, study directors, and nonclinical scientists dealing with day-to-day issues encountered in drug development and assist in formulating strategies for resolution of these issues. In addition, the book will be a valuable reference for academicians and graduate students pursuing research related to nonclinical drug development.

Building Intelligent Interactive Tutors Beverly Park Woolf, 2010-07-28. Building Intelligent Interactive Tutors discusses educational systems that assess a student's knowledge and are adaptive to a student's learning needs. The impact of computers has not been generally felt in education due to lack of hardware, teacher training, and sophisticated software, and because current instructional software is neither truly responsive to student needs nor flexible enough to emulate teaching. Dr. Woolf taps into 20 years of research on intelligent tutors to bring designers and developers a broad range of issues and methods that produce the best intelligent learning environments possible, whether for classroom or life-long learning. The book describes multidisciplinary approaches to using computers for teaching, reports on research development and real-world experiences, and discusses intelligent tutors, web-based learning systems, adaptive learning systems, intelligent agents, and intelligent multimedia. It is recommended for professionals, graduate students, and others in computer science and educational technology who are developing online tutoring systems to support e-learning and who want to build intelligence into the system. Combines both theory and practice to offer most in-depth and up-to-date treatment of intelligent tutoring systems available. Presents powerful drivers of virtual teaching systems including cognitive science, artificial intelligence, and the Internet. Features algorithmic material that enables programmers and researchers to design building components and intelligent systems.
