Contributed conference papers **Aging Infrastructure** Library of Congress. Congressional Research Service,2005 Provides background information on the dam safety activities and funding mechanisms including an overview of dam failure risks Federal dam safety management State dam safety programs unsafe dams and dam rehabilitation **Aging Infrastructure** ,2008 While dams have multiple benefits they also represent a risk to public safety and economic infrastructure This risk stems from two sources the likelihood of a dam failure and the damage it would cause While dam failures are infrequent age

construction deficiencies inadequate maintenance and seismic or weather events contribute to the likelihood To reduce the risk regular inspections are necessary to identify deficiencies and then corrective action must be taken To identify deficiencies that could cause dam failures the federal government established inspection requirements for the nation s federal dams Once deficiencies are identified most agencies finance repairs through their operation and maintenance accounts Funding mechanisms vary for larger rehabilitation activities At the Bureau of Reclamation for example most larger repairs are conducted with annual appropriations to its dam safety program At some other agencies dam rehabilitation must compete with other construction projects for funding At non federal dams safety is generally a state responsibility though some federal assistance has been provided Funding through the National Dam Safety Program which is authorized through FY2006 helps states improve their dam safety programs and train inspectors In addition the Federal Energy Regulatory Commission and the Department of Labor Mine Safety and Health Administration require regular inspections at the non federal dams within their jurisdiction Even so there are concerns that most state dam safety programs have inadequate staff and funds to effectively inspect or monitor all of the dams for which they are responsible Further there are concerns that states local governments and other non federal dam owners may not have the financial resources to maintain and rehabilitate their dams Following the failure of the levee at Lake Pontchartrain in 2005 it is likely that there will be increased scrutiny of flood control infrastructure and the structural stability of high hazard potential dams Further there has been periodic pressure for Congress to pass legislation authorizing federal support for rehabilitation work at non federal dams Demand for such assistance is likely to increase but there is currently no federal policy that describes the conditions under which federal funding is appropriate nor has Congress established criteria for prioritizing funding among non federal projects To help inform discussions on the federal role in dam safety this report provides background information on the nation s dam safety activities and funding mechanisms It will not be updated
