Population Migration and the Changing World Order W. T. S. Gould, A. M. Findlay, 1994-09-06 International population migration has recently become a major topic of renewed interest to the global community With the ending of the Cold War many of the physical and political barriers to migration have fallen and as international economic disparities have widened the incentive for movement has grown In many countries new legislative and administrative restrictions have been imposed on the immigration of economic migrants and refugees Population Migration and the Changing World Order is a collection of 16 papers built around the theme of how global migration systems have been affected by recent geopolitical and geoeconomic changes It contains general introductory and concluding overviews and three sections that focus on movements within the Developed World from the Third World to the Developed World and within the Third World These case study chapters draw on original research from a wide range of geographical areas including Europe Asia Australia Africa and North America and deal thematically with specific migrant categories both in terms of origin and destination workers and families skilled and unskilled refugees and school leavers rich and poor Overall this collection offers a global perspective by geographers on a widespread phenomenon of growing concern and importance It presents international migration in the 1990s not as a threat to economic and political stability but rather as an opportunity for migrants and states to react positively to the new and still changing world order **Rethinking Development Geographies** Marcus Power, 2004-08-02 Development as a concept is notoriously imprecise vague and presumptuous Struggles over the meaning of this fiercely contested term have had profound implications on the destinies of people and places across the globe Rethinking Development Geographies offers a stimulating and critical introduction to the study of geography and development In doing so it sets out to explore the spatiality of development thinking and practices The book highlights the geopolitical nature of development and its origins in Empire and the Cold War It also reflects critically on the historical engagement of geographers with the Tropics the Third World and the South The dominant economic and political philosophies that shape the policies and perspectives of major institutions are discussed The interconnections between globalization and development are highlighted through an examination of local national and transnational resistance to various forms of development The

text provides an accessible introduction to the complex and confusing world of contemporary global development Informative diagrams cartoons and case studies are used throughout While exploring global geographies of economic and political change Rethinking Development Geographies is also grounded in a concern with people and places the view from below the views of women and the view from the South
