Duped Timothy R.

Levine,2019-11-05 A scrupulous account that overturns many commonplace notions about how we can best detect lies and falsehoods From the advent of fake news to climate science denial and Bernie Madoff s appeal to investors people can be astonishingly gullible Some people appear authentic and sincere even when the facts discredit them and many people fall victim to conspiracy theories and economic scams that should be dismissed as obviously ludicrous This happens because of a near universal human tendency to operate within a mindset that can be characterized as a truth default We uncritically accept most of the messages we receive as honest We all are perceptually blind to deception We are hardwired to be duped The question is can anything be done to militate against our vulnerability to deception without further eroding the trust in people and social institutions that we so desperately need in civil society Timothy R Levine s Duped Truth Default Theory and the Social Science of Lying and Deception recounts a decades long program of empirical research that culminates in a new theory of deception truth default theory This theory holds that the content of incoming communication is typically and uncritically accepted as true and most of the time this is good Truth default allows humans to function socially Further because most deception is enacted by a few prolific liars the so called truth bias is not really a bias after all Passive belief makes us right most of the time but the catch is that it also makes us vulnerable to occasional deceit Levine s research on lie detection and truth bias has produced many provocative new findings over the years He has uncovered what makes some people more believable than others and has discovered several ways to improve lie detection accuracy In Duped Levine details where these ideas came from how they were tested and how the findings combine to produce a coherent new understanding of human deception and deception detection

Covers EEG event related brain potentials ERP and autonomic detection measures Reviews multiple verbal lie detection tools
Discusses ocular movements during deception and evasion Identifies how to perceive malicious intentions Explores
personality dimensions associated with deception including religion age and gender *Automatic Detection of Verbal
Deception* Eileen Fitzpatrick, Joan Bachenko, Tommaso Fornaciari, 2022-05-31 The attempt to spot deception through its
correlates in human behavior has a long history Until recently these efforts have concentrated on identifying individual cues
that might occur with deception However with the advent of computational means to analyze language and other human
behavior we now have the ability to determine whether there are consistent clusters of differences in behavior that might be
associated with a false statement as opposed to a true one While its focus is on verbal behavior this book describes a range of
behaviors physiological gestural as well as verbal that have been proposed as indicators of deception An overview of the
primary psychological and cognitive theories that have been offered as explanations of deceptive behaviors gives context for
the description of specific behaviors The book also addresses the differences between data collected in a laboratory and real
world data with respect to the emotional and cognitive state of the liar It discusses sources of real world data and
problematic issues in its collection and identifies the primary areas in which applied studies based on real world data are
critical including police security border crossing customs and asylum interviews congressional hearings financial reporting
legal depositions human resource evaluation predatory communications that include Internet scams identity theft and fraud
and false product reviews Having established the background this book concentrates on computational analyses of deceptive
verbal behavior that have enabled the field of deception studies to move from individual cues to overall differences in
behavior The computational work is organized around the features used for classification from gram through syntax to
predicate argument and rhetorical structure The book concludes with a set of open questions that the computational work
has generated Theories and Applications in the Detection of Deception Gershon Ben-Shakhar, John J. Furedy, 2012-12-06
Polygraphy lie detection and the detection of deception are all terms that refer to an application of the science of
psychophysiology which itself employs physiological measures to study and differentiate between psychological processes
The issues raised by polygraphy are controversial One such issue is whether the polygraph is a genuinely scientifically based
application or merely a purported application of psychophysiology Such concerns are of interest not only to polygraph
practitioners and to specialists in psychophysiology but also to such other specialists as those in the legal and forensic
professions Moreover there are two sorts of nonspecialists who should also be concerned On the one hand there are the
potential users of the polygraph for example a manager who employs a polygrapher to check on subordinates on the other
hand there are those used by the polygraph the employee who is subjected to the poly graphic examination To begin with the

user of the polygraph this person should know not only about its overall accuracy but also about the rationales of the various detection methods and their validity for different purposes in different sorts of situations This information is important because even for the potential user there are costs as well as benefits Aside from the lack of trust generated by the polygraph there have also been successful suits by employees against employers so there are traps in polygraph usage that employers and managers need to keep in mind
