Decision Analysis and Behavioral Research Detlof von Winterfeldt, Ward Edwards, 1986 **Decision Analysis and Behavioral Research** Detlof Von Winterfeldt, 1992 Decision Analysis and Behavioral Research D. von Winterfeldt, W. Edwards, 1986-09-26 Decision analysis is a technology designed to help individuals and organizations make wise inferences and decisions. It synthesises ideas from economics, statistics, psychology, operations research, and other disciplines. A great deal of behavioural research is relevant to decision analysis; behavioural scientists have both suggested easy and natural ways to describe and quantify problems and shown the kind of errors to which unaided intuitive judgements can lead. This long-awaited book offers the first integrative presentation of the principles of decision analysis in a behavioural context. The authors break new ground on a variety of technical topics: sensitivity analysis, the value/utility distinction, multistage inference, attitudes toward risk, and attempt to make intuitive sense out of what have been treated in the literature as endemic biases and other errors of human judgement. Those interested in artificial intelligence will find it the easiest presentation of hierarchical Bayesian inference available. *Decision Analysis and Behavioral Research* Detlof Von Winterfeldt, Ward Edwards, 1992 Advances in Decision Analysis Ward Edwards, Ralph F. Miles Jr., Detlof von Winterfeldt, 2007-07-23 Decision analysis is a prescriptive theory that aids individuals or groups confronted with complex problems in a wide variety of contexts. By framing issues, identifying risks, eliciting stakeholder preferences, and suggesting alternative approaches, decision analysts can offer workable solutions in domains such as the environment, health, and medicine, engineering, and operations research, and public policy. This book is a mixture of historical and forward-looking essays on key topics in decision analysis. Part I covers the history and foundations of decision analysis. Part II discusses structuring decision problems, including the development of objectives and their attributes and influence diagrams. Part III discusses probabilities and their elicitation and Bayes nets. Part IV discusses additive and multiplicative utilities, risk preferences, and option pricing methods. Part V discusses risk analysis. Part VI puts decision analysis in a behavioral and organizational context. Part VII presents case studies of applications. Behavioral Decision Analysis Florian M. Federspiel, Gilberto Montibeller, Matthias Seifert, 2024-05-30 This book lays out a foundation and taxonomy for Behavioral Decision Analysis, featuring representative work across various domains. Traditional research in the domain of Decision Analysis has focused on the design and application of logically consistent tools to support decision makers during the process of structuring problem complexity, modeling uncertainty, generating predictions, eliciting preferences, and ultimately making better decisions. Two commonly held assumptions are that the decision maker's cognitive belief system is fully accessible and that this system can be understood and formalized by trained analysts. However, in past years, an active line of research has emerged studying instances in which such assumptions may not hold. This book unites this community under the common theme of Behavioral Decision Analysis. The taxonomy used in this book categorizes research based on task focus: prediction or decision, and

behavioral level individual or group Two theoretical lenses that lie at the interface between 1 normative and descriptive research and 2 normative and prescriptive research are introduced The book then proceeds to highlight representative works across the two lenses focused on individual and group level decision making Featuring various methodologies and applications the book serves as a reference for researchers students and professionals across different disciplines with a common interest in Behavioral Decision Analysis

Cole Smith, Terry Connolly, Young-Jun Son, 2008-07-20 On February 27 and 28 of 2006 the University of Arizona held a workshop entitled Decision Modeling and Behavior in Uncertain and Complex Environments sponsored by the Air Force Office of Scientific Research under a Multidisciplinary University Research Initiative MURI grant The purpose of the workshop was to assemble preeminent researchers studying problems at the interface of behavioral and cognitive science decision analysis and operations research This book is a compilation of 14 chapters based on the presentations given during the workshop These contributions are grouped into four general areas which describe in some detail the challenges in conducting novel research in this field Part One is concerned with the need for integrating decision analysis and behavioral models Robert T Clemen discusses how the fields of behavioral search and decision analysis have diverged over time and makes a compelling case to establish new links between the disciplines He recommends leveraging lessons learned from behavioral studies within prescriptive decision analysis studies and evaluating the practical impact of those prescriptive techniques in helping decision makers achieve their objectives Jenna L Marquard and Stephen M Robinson address eleven common traps that face decision model analysts and users An understanding of these traps leads to an understanding of modeling features that either help or hurt the decision making process The authors link theory and practice by examining a set of case studies across a diverse array of model scenarios and provide a checklist of recommendations for analysts confronted by these eleven traps **ORGANIZATIONAL BEHAVIOR AND HUMANS**

DECISION PROCESSES , *Decision Science and Technology* James Shanteau, Barbara A. Mellers, David A.

Schum, 2012-12-06 *Decision Science and Technology* is a compilation of chapters written in honor of a remarkable man Ward Edwards. Among Ward's many contributions are two significant accomplishments either of which would have been enough for a very distinguished career. First, Ward is the founder of behavioral decision theory. This interdisciplinary discipline addresses the question of how people actually confront decisions as opposed to the question of how they should make decisions. Second, Ward laid the groundwork for sound normative systems by noticing which tasks humans can do well and which tasks computers should perform. This volume, organized into five parts, reflects those accomplishments and more. The book is divided into four sections. Behavioral Decision Theory examines theoretical descriptions and empirical findings about human decision making. Decision Analysis examines topics in decision analysis. Decision in Society explores issues in societal decision making. The final section, Historical Notes, provides some historical perspectives on the development of the decision theory. Within these sections, major multi-disciplinary scholars in decision theory have written chapters exploring some very bold themes in the field, as an examination of the book's contents will show. The main reason for the health of the Decision Analysis field is its close links between theory and applications that have characterized it over the years. In this volume, the chapters by Barron and Barrett, Fishburn, Fryback, Keeney, Moreno, Pericchi, and Kadane, Howard, Phillips, Slovic, and Gregory Winkler, and above all, von Winterfeldt, focus on those links. Decision science, originally developed out of concern with real decision problems and applied work such as is represented in this volume, will help the field to remain strong. *Management*

The book incorporates a comprehensive review of the issue of power. Each chapter ends with a Research in Action section where examples from research studies are used to illustrate issues raised in the chapter. **Decision Analysis for Program Evaluators** Gordon F.
