## **Decision And Control In Management Science Essays In Honor Of Alan Haurie:**

*Decision & Control in Management Science* Georges Zaccour, 2013-04-17 *Decision Control in Management Science* analyzes emerging decision problems in the management and engineering sciences. It is divided into five parts. The first part explores methodological issues involved in the optimization of deterministic and stochastic dynamical systems. The second part describes approaches to the model energy and environmental systems and draws policy implications related to the mitigation of pollutants. The third part applies quantitative techniques to problems in finance and economics such as hedging of options, inflation targeting and equilibrium asset pricing. The fourth part considers a series of problems in production systems. Optimization methods are put forward to provide optimal policies in areas such as inventory management, transfer line flow shop and other industrial problems. The last part covers game theory. Chapters range from theoretical issues to applications in politics and interactions in franchising systems. *Decision Control in Management Science* is an excellent reference covering methodological issues and applications in operations research, optimal control and dynamic games.

**Portfolio Management with Heuristic Optimization** Dietmar G. Maringer, 2006-07-02 *Portfolio Management with Heuristic Optimization* consists of two parts. The first part, Foundations, deals with the foundations of portfolio optimization, its assumptions, approaches and the limitations when traditional optimization techniques are to be applied. In addition, the basic concepts of several heuristic optimization techniques are presented along with examples of how to implement them for financial optimization problems. The second part, Applications and Contributions, consists of five chapters covering different problems in financial optimization: the effects of linear, proportional and combined transaction costs together with integer constraints and limitations on the initial endowment to be invested; the diversification in small portfolios; the effect of cardinality constraints on the Markowitz efficient line; the effects and hidden risks of Value at Risk when used; the relevant risk constraint; the problem factor selection for the Arbitrage Pricing Theory. **OR/MS Today**, 2002. [Games in Management Science](#) Pierre-Olivier Pineau, Simon Sigué, Sihem Taboubi, 2019-08-14 This book covers a large spectrum of cutting edge game theory applications in management science in which Professor Georges Zaccour has made significant contributions. The book consists of 21 chapters and highlights the latest treatments of game theory in various areas including marketing, supply chains, energy and environmental management and cyber defense. With this book, former Ph.D. students and successful research collaborators of Professor Zaccour wish to honor his many scientific achievements. **Interfaces**, 2002.

**The British National Bibliography** Arthur James Wells, 2003. **Bibliographie internationale annuelle des mélanges**, 2003. **Control Theory and Dynamic Games in Economic Policy Analysis** Maria Luisa Petit, 1990 This book deals with the stabilisation and control of centralised policy making and its economic implications. **Decision and Control** Stafford Beer, 1966 Study of operational research in management includes sections on decision making and control, simulation, automation and the outcome for industry and government. **Management Science and Decision Technology**
