Decisions Uncertainty And The Brain The Science Of Neuroeconomics:

Decisions, Uncertainty, and the Brain Paul W. Glimcher, 2004-09-17 In this provocative book Paul Glimcher argues that economic theory may provide an alternative to the classical Cartesian model of the brain and behavior Glimcher argues that Cartesian dualism operates from the false premise that the reflex is able to describe behavior in the real world that animals inhabit A mathematically rich cognitive theory he claims could solve the most difficult problems that any environment could present eliminating the need for dualism by eliminating the need for a reflex theory Such a mathematically rigorous description of the neural processes that connect sensation and action he explains will have its roots in microeconomic theory Economic theory allows physiologists to define both the optimal course of action that an animal might select and a mathematical route by which that optimal solution can be derived Glimcher outlines what an economics based cognitive model might look like and how one would begin to test it empirically Along the way he presents a fascinating history of neuroscience He also discusses related questions about determinism free will and the stochastic nature of complex behavior

Neuroeconomics Paul W. Glimcher, 2013-08-13 In the years since it first published *Neuroeconomics Decision Making and the Brain* has become the standard reference and textbook in the burgeoning field of neuroeconomics The second edition a nearly complete revision of this landmark book will set a new standard This new edition features five sections designed to serve as both classroom friendly introductions to each of the major subareas in neuroeconomics and as advanced synopses of all that has been accomplished in the last two decades in this rapidly expanding academic discipline The first of these sections provides useful introductions to the disciplines of microeconomics the psychology of judgment and decision computational neuroscience and anthropology for scholars and students seeking interdisciplinary breadth The second section provides an overview of how human and animal preferences are represented in the mammalian nervous systems Chapters on risk time preferences social preferences emotion pharmacology and common neural currencies each written by leading experts lay out the foundations of neuroeconomic thought The third section contains both overview and in depth chapters on the fundamentals of reinforcement learning value learning and value representation The fourth section *The Neural Mechanisms for Choice* integrates what is known about the decision making architecture into state of the art models of how we make choices The final section embeds these mechanisms in a larger social context showing how these mechanisms function during social decision making in both humans and animals The book provides a historically rich exposition in each of its chapters and emphasizes both the accomplishments and the controversies in the field A clear explanatory style and a single expository voice characterize all chapters making core issues in economics psychology and neuroscience accessible to scholars from all disciplines The volume is essential reading for anyone interested in neuroeconomics in particular or decision making in general Editors and contributing authors are among the acknowledged experts and founders in the field making this the authoritative reference for neuroeconomics Suitable as an advanced

undergraduate or graduate textbook as well as a thorough reference for active researchers. Introductory chapters on economics, psychology, neuroscience, and anthropology provide students and scholars from any discipline with the keys to understanding this interdisciplinary field. Detailed chapters on subjects that include reinforcement learning, risk, intertemporal choice, drift diffusion models, game theory, and prospect theory make this an invaluable reference. Published in association with the Society for Neuroeconomics, www.neuroeconomics.org. Full color presentation throughout with numerous carefully selected illustrations to highlight key concepts.

Foundations of Neuroeconomic Analysis Paul W. Glimcher, 2010-11-24. A new academic field, neuroeconomics, has emerged at the border of the social and natural sciences. In *Foundations of Neuroeconomic Analysis*, Paul Glimcher argues that a meaningful interdisciplinary synthesis of the study of human and animal choice is not only desirable but also well underway, and so it is time to formally develop a foundational approach for the field. He does so by laying the philosophical and empirical groundwork and integrating the theory of choice and valuation with the relevant physical constraints and mechanisms.

Neuroeconomics and the Decision-Making Process Christiansen, Bryan, 2016-03-17. Neuroeconomics has emerged as a field of study with the goal of understanding the human decision making process and the mental consideration of multiple outcomes based on a selected action. In particular, neuroeconomics emphasizes how economic conditions can impact and influence the decision making process and alternately how human actions have the power to impact economic conditions. *Neuroeconomics and the Decision Making Process* presents the latest research on the relationship between neuroscience, economics, and human decision making, including theoretical foundations, real world applications, and models for implementation. Taking a cross disciplinary approach to neuroeconomic theory and study, this publication is an essential reference source for economists, psychologists, business professionals, and graduate level students across disciplines.

Decision Making: Neural and Behavioural Approaches, 2013-01-10. This well established international series examines major areas of basic and clinical research within neuroscience as well as emerging and promising subfields. This volume explores interdisciplinary research on decision making, taking a neural and behavioural approach. Leading authors review the state of the art in their field of investigation and provide their views and perspectives for future research. Chapters are extensively referenced to provide readers with a comprehensive list of resources on the topics covered. All chapters include comprehensive background information and are written in a clear form that is also accessible to the non specialist.

Neuroeconomics Peter Politser, 2008-03-12. As technology has opened new windows into the brain, it has clarified what happens there when people make decisions about money. This clarity has produced a new science called neuroeconomics, which addresses diverse questions such as why people save, buy stocks, steal, and overspend. The many different methods used in neuroeconomics have, however, often yielded unclear findings about the quality of these decisions, primarily because the field has lacked both guidelines for categorizing the different aspects of quality and guidelines for selecting methods to study these aspects. Before this book, in which Peter

Politzer guides the reader through the different regions of study there was no scientific guide for those interested in neuroeconomics Politser shows how to evaluate specific elements of choice such as regret expectation risk ambiguity time preference and learning and surveys economic and behavioral models of decision making skills He reviews the neural correlates of decisional impairments and inconsistencies clarifying for example why we do not recall what we experience experience what we expect or like what we want and provides detailed tables of decision making skills their neural correlates and possible impairments Politser also considers what the field of neuroeconomics may add to future conceptions of decision making and outlines the limitations of various studies of different capacities He then introduces a broader field for the design and interpretation of neuroeconomic studies a neuroepidemiology of decision making Everyone who wants to understand the research in neuroeconomics or use its methods should read this book Its accessible text along with an extensive glossary will guide those with little economic or neuroscience background and make the book an excellent supplement for courses on neuroscience and decision making
