Computing: Applications and Technologies Kim-Meow Liew, Hong Shen, Simon See, Wentong Cai, Pingzhi Fan, Susumu Horiguchi, 2004-12-07 The 2004 International Conference on Parallel and Distributed Computing Applications and Technologies PDCAT 2004 was the 5th annual conference and was held at the Marina Mandarin Hotel Singapore on December 8-10, 2004. Since the inaugural PDCAT held in Hong Kong in 2000, the conference has become a major forum for scientists, engineers, and practitioners throughout the world to present the latest research results, ideas, developments, techniques, and applications in all areas of parallel and distributed computing. The technical program was comprehensive and featured keynote speeches, technical paper presentations, and exhibitions showcased by industry vendors. The technical program committee was overwhelmed with submissions of papers for presentation from countries worldwide. We received 242 papers and after viewing them based on stringent selection criteria, we accepted 173 papers. The papers in the proceedings focus on parallel and distributed computing viewed from the three perspectives of networking and architectures, software systems and technologies, and algorithms and applications. We acknowledge the great contribution from all of our local and international committee members and reviewers who devoted their time in the review process and provided valuable feedback for the authors. PDCAT 2004 could never have been successful without the support and assistance of several institutions and many people. We sincerely appreciate the support from the National Grid Office and IEEE Singapore for technical co-sponsorship. The financial sponsorships from the industrial sponsors Hewlett Packard Singapore, IBM Singapore, Sun Microsystems, SANDZ Solutions, Silicon Graphics, and Advanced Digital Information Corporation are gratefully acknowledged.

Algebraic Probability Theory Imre Ruzsa, Gábor J. Székely, 1988-11-28 A large part of probability theory is the study of operations on and convergence of probability distributions. The most frequently used operations turn the set of distributions into a semigroup. A considerable part of probability theory can be expressed, proved, sometimes even understood in terms of the abstract theory of topological semigroups. The authors algebraic probability theory is a field where problems stem mainly from probability theory have an arithmetical flair and are often dressed in terms of algebra while the tools employed frequently belong to the theory of complex functions and abstract harmonic analysis. It lies at the crossroads of numerous mathematical theories and should serve as a catalyst to further research.
