Database Systems For Advanced Applications '95 - Proceedings Of The Fourth International Conference Wang Ling Tok,Yoshifumi Masunaga,1995-03-31 This volume contains three keynote papers and 51 technical papers from contributors around the world on topics in the research and development of database systems such as Data Modelling Object Oriented Databases Active Databases Data Mining Heterogeneous Databases Distributed Databases Parallel Query Processing Multi Media Databases Transaction Management Systems Document Databases Temporal Databases Deductive Databases User Interface and Advanced Database Applications **Database Systems For Advanced Applications '91 - Proceedings Of**

The 2nd International Symposium On Database Systems For Advanced Applications Akifumi Makinouchi,1992-09-21 This book provides an authoritative overview of the global development of surgical paediatrics Biographical accounts of key people who developed this relatively new specialty many of whom are now household names are presented The compendium also acknowledges the enormous contribution of imaging ultrasound MRI and PET scans minimal invasive surgery and fetal surgery as well as the role of related journals and associations in the progress of surgical paediatrics Many of the contributors have been instrumental to the development of surgical paediatrics in their respective countries and have considerable worldwide influence on the management of children requiring surgical care Through their valuable insight and first hand experience this book not only shines a light on the past achievements of previous generations of paediatric surgeons but also serves as a model to encourage future generations to do likewise **Database Theory - ICDT '92**

Joachim Biskup,Richard Hull,1992-10-05 The papers in this volume were presented at the International Conference on Database Theory held in Berlin Germany October 14 16 1992 This conference initiated the merger of two series of conferences on theoretical aspects of databases that were formed in parallel by different scientific communities in Europe The first series was known as the International Conference on Database Theory and the second as the Symposium on Mathematical Fundamentals of Database Systems In the future ICDT will be organized every two years alternating with the more practically oriented series of conferences on Extending Database Technology EDBT The volume contains 3 invited lectures and 26 contributed papers selected from a total of 107 submissions The papers are organized into sections on

constraints and decomposition query languages updates and active databases concurrency control and recovery knowledge bases datalog complexity and optimization object orientation information capacity and security and data structures and algorithms Two of the invited papers survey research into theoretical database issues done in Eastern Europe during the past decade

Database and Expert Systems Applications, 2002 *Advances in Databases* Michael F. Worboys, Anna F. Grundy, 1993-06-23 This volume contains the proceedings of the eleventh British National Conference on Databases held at Keele University England A dominant theme in the volume is the provision of the means to enhance the capabilities of databases to handle information that has a rich semantic structure A major research question is how to achieve such a semantic scale up without sacrificing performance There are currently two main paradigms within which it is possible to propose answers to this question deduction oriented and object oriented Both paradigms are well represented in this collection with the balance in the direction of the deductive approach which is followed by both the invited papers by Michael Freeston from the European Computer Industry Research Centre in Munich and Carlo Zaniolo from the University of California at Los Angeles In addition the volume contains 13 full papers selected from a total of 36 submissions

Database and Expert Systems Applications Vladimír Mařík, Jiří Lažanský, Roland R. Wagner, 1993 This volume constitutes the proceedings of the 4th International Conference on Database and Expert Systems Applications DEXA held in Prague Czech Republic in September 1993 Traditionally the objective of the DEXA conferences is to serve as an international forum for the discussion and exchange of research results and practical experience among theoreticians and professionals working in the field of database and artificial intelligence technologies Despite the fact that in the conference title the applications aspect is mentioned explicitly the theoretical and the practical points of view in the field are well balanced in the program of DEXA 93 The growing importance of the conference series is outlined by the remarkably high number of 269 submissions and by the support given by renowned organizations DEXA 93 is held for the first time outside the former GDR in an East European country and is essentially contributing to the advancement of the East West scientific cooperation in the field of database and AI systems This proceedings contains the 78 contributed papers carefully selected by an international program committee with the support of a high number of subreferees The volume is organized in sections on data models distributed databases advanced database aspects database optimization and performance evaluation spatial and geographic databases expert systems and knowledge engineering legal systems other database and artificial intelligence applications software engineering and hypertext hypermedia and user interfaces PUBLISHER'S WEBSITE

Applications of Logic Databases Raghu Ramakrishnan, 1995 The premise behind developing powerful declarative database languages is compelling by enabling users to specify their queries and their integrity constraints in a clear non operational way they make the user's task easier and provide the database system with more opportunities for optimization Relational database systems offer a striking proof that this premise is indeed valid The most popular relational query language SQL is based upon relational

algebra and calculus i.e a small fragment of first order logic and the ease of writing queries in SQL in comparison to more navigational languages has been an important factor in the commercial success of relational databases It is well known that SQL has some important limitations in spite of its success and popularity Notably the query language is non recursive and support for integrity constraints is limited Indeed recognizing these problems the latest standard SQL 92 provides increased support for integrity constraints and it is anticipated that the successor to the SQL 92 standard called SQL3 RECURSIVE UNION operation 1 Logic database systems have will include a concentrated on these extensions to the relational database paradigm and some systems e.g Bull's DEL prototype have even incorporated object oriented features another extension likely to appear in SQL3

Logic Programming and Automated Reasoning Andrei Voronkov, 1992-07 This volume contains the proceedings of LPAR 92 the international conference on logic programming and automated reasoning held in St Petersburg in July 1992 The aim of the conference was to bring together researchers from the Russian and the international logic programming and theorem proving communities The topics of interest covered by papers in the volume include automated theorem proving non monotonic reasoning applications of mathematical logic to computer science deductive databases implementation of declarative concepts and programming in non classical logics LPAR 92 is the successor of the First and Second Russian Conferences on Logic Programming held in 1990 and 1991 respectively the proceedings of which were published in LNAI Vol 592
