## Deep Domain:

*Deep Domain* Howard Weinstein, 2000-09-22 *Deep Domain* A routine diplomatic visit to the water world of Akkalla becomes a nightmarish search for a missing Spock and Chekov a search that plunges Admiral Kirk headlong into a corrupt government's desperate struggle to retain power For both A Federation Science outpost and Akkalla's valiant freedom fighters have begun uncovering the ancient secrets hidden beneath her tranquil oceans Secrets whose exposure may even mean civil war for the people of Akkalla and death for the crew of the Starship Enterprise Domain Adaptation for Visual Understanding Richa Singh, Mayank Vatsa, Vishal M. Patel, Nalini Ratha, 2020-01-08 This unique volume reviews the latest advances in domain adaptation in the training of machine learning algorithms for visual understanding offering valuable insights from an international selection of experts in the field The text presents a diverse selection of novel techniques covering applications of object recognition face recognition and action and event recognition Topics and features reviews the domain adaptation based machine learning algorithms available for visual understanding and provides a deep metric learning approach introduces a novel unsupervised method for image to image translation and a video segment retrieval model that utilizes ensemble learning proposes a unique way to determine which dataset is most useful in the base training in order to improve the transferability of deep neural networks describes a quantitative method for estimating the discrepancy between the source and target data to enhance image classification performance presents a technique for multi modal fusion that enhances facial action recognition and a framework for intuition learning in domain adaptation examines an original interpolation based approach to address the issue of tracking model degradation in correlation filter based methods This authoritative work will serve as an invaluable reference for researchers and practitioners interested in machine learning based visual recognition and understanding **Real-world Deep Domain Adaptation Through Prediction Propagation** Michiel Anton Bakker, 2019 Deep learning based natural language processing classifiers often have difficulty classifying texts that stem from a different domain than the labeled training data Many domain adaptation methods have been proposed to train classifiers using only labeled texts from a single domain and unlabeled texts from other domains Nevertheless we find that the state of the art methods all lack one or more desirable properties for real world modeling In particular we find that the many methods using a domain adversarial loss are unable to model domains with different label distributions Motivated by these limitations we are developing a new method Prediction Propagation that can classify texts from different domains without using an adversarial loss Our method will use the label prediction for reconstructing the input text and backpropagates through the prediction as a way to learn label related information for the new domain Our method has the desirable properties for real world modeling while not compromising on performance Machine Learning and Knowledge Discovery in Databases.
