*Treatise on Heavy Ion Science* D.A. Bromley,1984-09-30 For 75 years the stopping of energetic ions in matter has been a subject of great theoretical and experimental interest The theoretical treatment of the stopping of ions in matter is largely due to the work of Bohr 1 3 Bethe 4 6 Bloch 7 s and Lindhard 9 12 and it has been reviewed by Bohr 3 Fano 13 17 20 Jackson 14 Sigmund 15 Ahlen 16 and Ziegler et al Soon after the discovery of energetic particle emission from radioactive materials there was interest in how these corpuscles were slowed down in traversing matter In 1900 Marie Curie stated 21 the hypothesis that Hies rayons alpha sont des projectiles materiels susceptibles de perdre de leur vitesse en travers ant la matiere Early attempts to evaluate this were incon clusive for there was not yet an accurate proposed model of the atom Enough experimental evidence was collected in the next decade to make stopping power theory one of the central concerns of those attempting to develop an atomic model J J Thomson director of the prestigious Cavendish Laboratory and Niels Bohr

a fresh postdoctoral scientist at Rutherford's Manchester Laboratory both published almost simultaneously<sup>22 23</sup> an analysis of the stopping of charged particles by matter and each contained many of their divergent ideas on the model of an atom Thomson ignored in his paper the Rutherford alpha particle scattering<sup>24</sup> experiment of a year before But the nuclear atom with a heavy positively<sup>25</sup> charged core was the basis of Bohr's ideas
