Deep-Sky Companions: The Caldwell Objects Stephen James O'Meara, 2002 A complete observers guide to the Caldwell Objects

Deep-Sky Companions: The Caldwell Objects Stephen James O'Meara, 2016 The Caldwell Catalogue compiled by the late Sir Patrick Moore 1923 2012 has delighted amateur astronomers worldwide since its publication in 1995 Twenty years on Stephen James O Meara revisits his guide to these 109 deep sky delights breathing new life into them and the 20 additional observing targets included as an appendix This second edition retains O Meara s detailed visual descriptions and sketches accompanied by stunning new images taken by amateur photographer Mario Motta and observations by Magda Streicher The astrophysical descriptions have been updated to account for the many advances in our understanding of the objects not least due to an armada of space borne observatories and the new technologies used in large ground based telescopes Ideal for observers who have completed the Messier objects and are looking for their next challenge Deep Sky Companions The Caldwell Objects is a fitting tribute from a renowned visual observer to one of astronomy s most famous personalities

Deep-Sky Companions: Hidden Treasures Stephen James O'Meara, 2007-04-12 Stephen O Meara s new and exciting observing guide spotlights an original selection of 109 deep sky objects that will appeal to sky watchers worldwide His hidden treasures include a wonderful assortment of galaxies open clusters planetary nebulae and more all of which have been carefully chosen based on their popularity and ease of observing None of these objects are included in either the Messier or the Caldwell catalogs and all are visible in a 4 inch telescope under dark skies Stunning photographs and beautiful drawings accompany detailed visual descriptions of the objects which include their rich histories and astrophysical significance The author s original finder charts are designed to help observers get to their targets fast and efficiently

The Caldwell Objects and How to Observe Them Martin Mobberley, 2009-10-03 When Mike Inglis who consults for Springer rst asked me to write a Caldwell book in their and How to Observe Them series I admit I did need some time to think the suggestion over I am a fan of Patrick s Caldwell catalog as are most of the amateur astronomers I know but could a

new book be justified when the massive comprehensive and wrist spraining Caldwell tome by Stephen O'Meara covers the subject fully anyway That other book was researched and written over a 5 year period in the pre 9 11 world from 1996 to 2001 and its 484 pages of descriptive text and background data are a joy to peruse as are Stephen's impressive sketches OK the book is far too heavy for the binding and after a few trips outside half the pages in my copy fell out but apart from that it is an excellent book and surely impossible to improve upon or even equal especially in a smaller format book with only half the pages available at least that was my initial impression when I mulled over writing another Caldwell book However I changed my mind because a number of events of astronomical significance have occurred in the last 10 years First and foremost backyard imaging of deep sky objects especially color imaging has come on in leaps and bounds in the twenty first century
