*A Treatise on Diseases of the Bones* Thomas Masters Markoe, 1872      *The Annals of Otology, Rhinology & Laryngology*, 1903      **Atlas of Taphonomic Identifications** Yolanda Fernandez-Jalvo, Peter Andrews, 2016-07-28

The aim of the atlas is to provide images of taphonomic modifications, making it as comprehensive as possible with evidence presently available. This volume is intended both as a field guide for identifying taphonomic modifications in the field and for use in the laboratory when collections of fossils are being analyzed. Images in the book are a combination of scanning electron micrographs, regular photographs, cross sections of bones, and line drawings and graphs. By providing good quality illustrations of taphonomic modifications with links between similar types of modification, the atlas provides a reference source for identifying the agents responsible for the modifications, the processes by which they were formed, and the potential bias introduced by the processes. The authors also aim to emphasize on the directions they consider taphonomic studies should be headed. Firstly, we should seek to quantify the degree of bias introduced into a fossil fauna and to take account of this bias before interpreting the palaeoecology of the fossil site. Secondly, we should recognize that taphonomic modifications increase the information encoded in fossils by identifying perimortem and postmortem contexts.
