**From Automated to Autonomous Driving** Fabian Kröger, 2024-04-01. This book presents the most important milestones of the research on automated and autonomous driving in the United States, Japan, and Europe throughout five decades: 1950–2000. Drawing on sources from the automotive industry, electrical engineering, the robotics and AI domain, and military institutions, it retraces the transition from the guidance cable approach to vehicle-based sensor and vision systems. Giving a detailed overview of the technical concepts, artefacts, research vehicles, and robots, the book presents the transnational engineering efforts that started long before Silicon Valley entered the field. In addition, the book also uniquely details the role of the military in the domain of vehicle automation. This all ensures the book is of great interest to historians of technology, practitioners in engineering disciplines, scholars working in mobility studies, journalists, and political decision makers.
