Decade Of Neuropeptides:

A Decade of Neuropeptides George F. Koob, Curt A. Sandman, Fleur L. Strand, 1990 **A Decade of Neuropeptides** George F. Koob, Curt A. Sandman, Fleur L. Strand, 1990 **Primer on Cerebrovascular Diseases** Louis R. Caplan, Bo K. Siesjo, Bruce Weir, K. Michael Welch, Donald J. Reis, 1997-05-12 Primer on Cerebrovascular Diseases is a handy reference source for scientists students and physicians needing reliable up to date information on basic mechanisms physiology pathophysiology and medical issues related to brain vasculature The book consists of short specific chapters written by international experts on cerebral vasculature and presents the information in a comprehensive and easily accessible manner The book also contains valuable information on practical applications of basic research Presents topics in a comprehensive and accessible format Written by international authorities on cerebral vasculature Provides practical applications for researchers *Neuropeptide GPCRs in neuroendocrinology* Jae Young Seong, Hubert Vaudry, 2014-11-07 The human genome encompasses 860 G protein coupled receptors GPCRs including 374 non chemosensory GPCRs Half of these latter GPCRs recognize neuro peptides as natural ligands GPCRs thus play a pivotal role in neuroendocrine communication In particular GPCRs are involved in the neuroendocrine control of feeding behavior reproduction growth hydromineral homeostasis and stress response GPCRs are also major drug targets and hence possess a strong potential for the development of innovative pharmaceuticals The aim of this Research Topic was to assemble a series of review articles and original research papers on neuropeptide GPCRs and their ligands that would illustrate the different facets of the studies currently conducted in this domain **Psychopharmacology Bulletin** ,1966 Principles of Cellular, Molecular, and Developmental Neuroscience Oswald Steward, 1989 The field of cellular molecular and developmental neuroscience represents the interface between the three large well established fields of neuroscience cell biology and molecular biology In the last 10 to 15 years this new field has emerged as one of the most rapidly growing and exciting subdisciplines of neuroscience It is now becoming possible to understand many aspects of nervous system function at the molecular level and there already are dramatic applications of this information to the treatment of nervous system injury disease and genetic disorders Moreover there is great optimism that new strategies will emerge soon as a result of the explosion of information This book was written to introduce students to the major issues experimental strategies and current knowledge base in cellular molecular and developmental neuroscience The concept for the book arose from a section of an introductory neuroscience course given to first year medical students at the University of Virginia School of Medicine The text presumes a basic but not detailed understanding of nervous system organization and function and a background in biology It is intended as an appropriate introductory text for first year medical students or graduate students in neuroscience neurobiology psychobiology or related programs and for advanced undergraduate students with appropriate background in biology and neuroscience While some of the specific information presented undoubtedly will be outdated rapidly the gestalt of this

emerging field of inquiry as presented here should help the beginning student organize new information

Neuropeptide Systems as Targets for Parasite and Pest Control Timothy G. Geary, Aaron Maule, 2011-01-13 The need to continually discover new agents for the control or treatment of invertebrate pests and pathogens is undeniable Agriculture both animal and plant succeeds only to the extent that arthropod and helminth consumers vectors and pathogens can be kept at bay Humans and their companion animals are also plagued by invertebrate parasites The deployment of chemical agents for these purposes inevitably elicits the selection of resistant populations of the targets of control necessitating a regular introduction of new kinds of molecules Experience in other areas of chemotherapy has shown that a thorough understanding of the biology of disease is an essential platform upon which to build a discovery program Unfortunately investment of research resources into understanding the basic physiology of invertebrates as a strategy to illuminate new molecular targets for pesticide and parasiticide discovery has been scarce and the pace of introduction of new molecules for these indications has been slowed as a result An exciting and so far unexploited area to explore in this regard is invertebrate neuropeptide physiology This book was assembled to focus attention on this promising field by compiling a comprehensive review of recent research on neuropeptides in arthropods and helminths with contributions from many of the leading laboratories working on these systems

Neuropeptide Function in the Gastrointestinal Tract Edwin E. Daniel, 2019-08-15 First published in 1991 This book assimilates and evaluates the rapidly accumulating information regarding neuropeptides in the gut their chemistry genetic control processing in enteric nerves the projections of their nerves their actions at the tissue cell and molecular levels and their roles in controlling gut motility in health and disease Neuropeptide Function in the Gastrointestinal Tract is directed to scientists in all disciplines who work with neuropeptides as well as physiologists interested in the neural and smooth muscle actions of neuropeptides
