Decision Economics: In the Tradition of Herbert A. Simon's Heritage Edgardo Bucciarelli, Shu-Heng Chen, Juan M. Corchado, 2017-06-13 The special session on Decision Economics DECON is a scientific forum held annually and intended to share ideas projects research results models and experiences associated with the complexity of behavioural decision processes and socio economic phenomena DECON 2017 was held at the Polytechnic of Porto ISEP Portugal as part of the 14th International Conference on Distributed Computing and Artificial Intelligence For the second consecutive year the Editors of this book have drawn inspiration from Herbert A Simon s immense body of work and argue that Simon precipitated something akin to a revolution in microeconomics focused on the concept of decision making Further it is worth noting that the recognition of relevant decision making takes place in a range of critical subject areas and research fields including economics finance information systems small and international business management operations and production Therefore decision making issues are of fundamental importance in all branches of economics addressed both deductively and inductively Not surprisingly the study of decision making has seen growing empirical research efforts in the economic literature over the last sixty years and more recently a variety of insightful cutting edge experimental behavioural and computational approaches Additionally the awareness regarding generalizations and reductions to express economic concepts has led on the one hand to an increasing risk of spreading the language of mathematics as a rhetorical tool and on the other hand to an oversimplification and overlooking of some crucial details especially when it comes to human decisions and hence economic behaviour That awareness however has helped to produce an extraordinary volume of empirical research aimed at discovering how economic agents cope with complex decisions In this sense the international scientific community acknowledges Herbert A Simon s research endeavours to understand the processes involved in economic decision making and their implications for the advancement of economic professions Within the field of decision making indeed Simon s rejection of the standard decision making models used in neoclassical economics inspired social scientists worldwide to develop research programmes in order

to study decision making empirically The main achievements concern decision making for individuals firms markets governments institutions and last but not least science and research

Decision Economics Alfred R. Oxenfeldt,1997 The tools of managerial economics are familiar models cost estimates objectives valuations they are the basis of faster better decisions made every day What this slim volume intends is to provide understanding of how these tools relate and how they can be used effectively

Economic Decision Making Using Cost Data Daniel Marburger,2013-08-01 A firm maximizes profits if each decision adds more to the firm s revenue than to its costs Although the concept sounds rather simple it is difficult to do in practice To ease this difficulty the authors are giving you the inside knowledge to economic theory This book will help you understand economic theory and much more to accurately infer changes in revenues that may be associated with a decision And since economic theory suggests that the costs reported by accountants rarely reflect the true cost associated with the decision this book will help you understand how to assess the changes in revenues and costs Demand and price sensitivity analysis allow you to infer revenue changes and this book helps you reconcile the economic theory of cost with common accounting practices so the differences can be reconciled and better decisions can be made

Introduction to Economics John Roscoe Turner,1919 *Deliberation and Decision* Anne van Aaken,Christian List,2017-03-02 Deliberation and Decision explores ways of bridging the gap between two rival approaches to theorizing about democratic institutions constitutional economics on the one hand and deliberative democracy

on the other The two approaches offer very different accounts of the functioning and legitimacy of democratic institutions Although both highlight the importance of democratic consent their accounts of such consent could hardly be more different Constitutional economics models individuals as self interested rational utility maximizers and uses economic efficiency criteria such as incentive compatibility for evaluating institutions Deliberative democracy models individuals as communicating subjects capable of engaging in democratic discourse The two approaches are disjointed not only in terms of their assumptions and methodology but also in terms of the communication or lack thereof between their respective communities of researchers This book provides a comprehensive overview of the recent debate between the two approaches and makes new and original contributions to that debate
