Bergus, Scott B. Cantor, 1995 **Medical Thinking** Steven Schwartz, Timothy Griffin, 2012-12-06 Decision making is the physician s major activity Every day in doctors offices throughout the world patients describe their symptoms and complaints while doctors perform examinations order tests and on the basis of these data decide what is wrong and what should be done Although the process may appear routine even to the physicians involved each step in the sequence requires skilled clinical judgment Physicians must decide which symptoms

are important whether any laboratory tests should be done how the various items of clinical data should be combined and finally which of several treatments including doing nothing is indicated Although much of the information used in clinical decision making is objective the physician's values a belief that pain relief is more important than potential addiction to pain killing drugs for example and subjectivity are as much a part of the clinical process as the objective findings of laboratory tests In recent years both physicians and psychologists have come to realize that patient management decisions are not only subjective but also probabilistic although this is not always acknowledged overtly When doctors argue that an operation is fairly safe because it has a mortality rate of only 1 % they are at least implicitly admitting that the outcome of their decision is based on probability Decision Making in Health and Medicine, 2001 Rational Diagnosis and Treatment Peter Gøtzsche, 2008-03-11 Now in its fourth edition Rational Diagnosis and Treatment Evidence Based Clinical Decision Making is a unique book to look at evidence based medicine and the difficulty of applying evidence from group studies to individual patients The book analyses the successive stages of the decision process and deals with topics such as the examination of the patient the reliability of clinical data the logic of diagnosis the fallacies of uncontrolled therapeutic experience and the need for randomised clinical trials and meta analyses It is the main theme of the book that whenever possible clinical decisions must be based on the evidence from clinical research but the authors also explain the pitfalls of such research and the problems involved in applying evidence from groups of patients to the individual patient For this new edition the sections on placebo and meta analysis and on alternative medicine have been thoroughly updated and there is more focus on insufficient reporting of harms of interventions The sections on different research designs describe advantages and limitations and the increased medicalisation and the effects of cancer screening on health people are noted A section on academic freedom when clinicians collaborate with industry and ghost authors is added This essential reference work integrates the science and statistical approach of evidence based medicine with the art and humanism of medical practice distinguishing between data sets of data knowledge and wisdom and their application Such an intellectually challenging book is ideal for both medical students and doctors who require theoretical and practical clinical skills to help ensure that they apply theory in practice

Computer-Assisted Medical Decision Making J.A. Reggia, S. Tuhim, 2012-12-06 Computer technology has impacted the practice of medicine in dramatic ways Imaging techniques provide noninvasive tools which alter the diagnostic process Sophisticated monitoring equipment presents new levels of detail for both patient management and research In most of these high technology applications the computer is embedded in the device its presence is transparent to the user There is also a growing number of applications in which the health care provider directly interacts with a computer In many cases these applications are limited to administrative functions e.g. office practice management location of hospital patients appointments and scheduling Nevertheless there also are instances of patient care functions such as results reporting decision support surveillance and reminders This series Computers and Medicine will focus upon the direct use of

information systems as it relates to the medical community After twenty five years of experimentation and experience there are many tested applications which can be implemented economically using the current generation of computers Moreover the falling cost of computers suggests that there will be even more extensive use in the near future Yet there is a gap between current practice and the state of the art
