*Equivariant Orthogonal Spectra and  $S$ -Modules* M. A. Mandell, J. Peter May, 2002 The last few years have seen a revolution in our understanding of the foundations of stable homotopy theory Many symmetric monoidal model categories of spectra whose homotopy categories are equivalent to the stable homotopy category are now known whereas no such categories were known before 1993 The most well known examples are the category of  $S$  modules and the category of symmetric spectra We focus on the category of orthogonal spectra which enjoys some of the best features of  $S$  modules and symmetric spectra and which is particularly well suited to equivariant generalization We first complete the nonequivariant theory by comparing orthogonal spectra to  $S$  modules We then develop the equivariant theory For a compact Lie group  $G$  we construct a symmetric monoidal model category of orthogonal  $G$  spectra whose homotopy category is equivalent to the classical stable homotopy category of  $G$  spectra We also complete the theory of  $S_G$  modules and compare the categories of orthogonal  $G$  spectra and  $S_G$  modules A key feature is the analysis of change of universe change of group fixed point and orbit functors in these two highly structured categories for the study of equivariant stable homotopy theory

*Desingularization of Nilpotent Singularities in Families of Planar Vector Fields* Daniel Panazzolo, 2002 This work aims to prove a desingularization theorem for analytic families of two dimensional vector fields under the hypothesis that all its singularities have a non vanishing first jet Application to problems of singular perturbations and finite cyclicity are discussed in the last chapter

Dualities on Generalized Koszul Algebras Edward L. Green, Idun Reiten, Øyvind Solberg, 2002 Koszul rings are graded rings which have played an important role in algebraic topology noncommutative algebraic geometry and in the theory of

quantum groups One aspect of the theory is to compare the module theory for a Koszul ring and its Koszul dual There are dualities between subcategories of graded modules the Koszul modules

**$q$ -Difference Operators, Orthogonal Polynomials, and Symmetric Expansions** Douglas Bowman, 2002 The author explores ramifications and extensions of a  $q$  difference operator method first used by L J Rogers for deriving relationships between special functions involving certain fundamental  $q$  symmetric polynomials In special cases these symmetric polynomials reduce to well known classes of orthogonal polynomials A number of basic properties of these polynomials follow from this approach This leads naturally to the evaluation of the Askey Wilson integral and generalizations Expansions of certain generalized basic hypergeometric functions in terms of the symmetric polynomials are also found This provides a quick route to understanding the group structure generated by iterating the two term transformations of these functions Some infrastructure is also laid for more general investigations in the future

**$h$ -Principles and Flexibility in Geometry** Hansjörg Geiges, 2003 The notion of homotopy principle or  $h$  principle is one of the key concepts in an elegant language developed by Gromov to deal with a host of questions in geometry and topology Roughly speaking for a certain differential geometric problem to satisfy the  $h$  principle is equivalent to saying that a solution to the problem exists whenever certain obvious topological obstructions vanish The foundational examples for applications of Gromov's ideas include i Hirsch Smale immersion theory ii Nash Kuiper C 1 isometric immersion theory iii existence of symplectic and contact structures on open manifolds Gromov has developed several powerful methods that allow one to prove  $h$  principles These notes based on lectures given in the Graduiertenkolleg of Leipzig University present two such methods which are strong enough to deal with applications i and iii

*Dynamics of Topologically Generic Homeomorphisms* Ethan Akin, Mike Hurley, Judy Anita Kennedy, 2003 The goal of this work is to describe the dynamics of generic homeomorphisms of certain compact metric spaces  $X$  Here generic is used in the topological sense a property of homeomorphisms on  $X$  is generic if the set of homeomorphisms with the property contains a residual subset in the sense of Baire category of the space of all homeomorphisms on  $X$  The spaces  $X$  we consider are those with enough local homogeneity to allow certain localized perturbations of homeomorphisms for example any compact manifold is such a space We show that the dynamics of a generic homeomorphism is quite complicated with a number of distinct dynamical behaviors coexisting some resemble subshifts of finite type others which we call generalized adding machines appear strictly periodic when viewed to any finite precision but are not actually periodic Such a homeomorphism has infinitely many intricately nested attractors and repellers and uncountably many distinct dynamically connected components of the chain recurrent set We single out several types of these chain components and show that each type occurs densely in an appropriate sense in the chain recurrent set We also identify one type that occurs generically in the chain recurrent set We also show that at least for  $X$  a manifold the chain recurrent set of a generic homeomorphism is a Cantor set so its complement is open and dense Somewhat surprisingly there is a residual subset of  $X$  consisting of points whose limit

sets are chain components of a type other than the type of chain components that are residual in the space of all chain components In fact for each generic homeomorphism on  $X$  there is a residual subset of points of  $X$  satisfying a stability condition stronger than Lyapunov stability

**Numerical Control over Complex Analytic Singularities** David B. Massey, 2003 Generalizes the Le cycles and numbers to the case of hyper surfaces inside arbitrary analytic spaces This book defines the Le Vogel cycles and numbers and prove that the Le Vogel numbers control Thom's  $a_f$  condition It describes the relationship between the Euler characteristic of the Milnor fibre and the Le Vogel numbers

On Central Critical Values of the Degree Four  $L$ -functions for  $\mathrm{GSp}(4)$ : The Fundamental Lemma Masaaki Furusawa, Joseph A. Shalika, 2003 Proves two equalities of local Kloosterman integrals on  $\mathrm{GSp}(4)$  the group of 4 by 4 symplectic similitude matrices This book conjectures that both of Jacquet's relative trace formulas for the central critical values of the  $L$  functions for  $\mathrm{GSp}(4)$  in  $J_1$  and  $J_2$
