Deductive Logic An Introduction To Evaluation Techniques And Logical Theory:

Deductive Logic David S. Clarke, Richard Behling, 1998 Deductive Logic is designed as an intermediate level text directed at upper division students from philosophy and the humanities Its focus is exclusively on deductive logic avoiding altogether topics such as informal reasoning and scientific method normally included in introductory logic courses Its exposition of logical topics is informal with emphasis on explaining the basic concepts and procedures of modern symbolic logic in the simplest and most intuitive manner possible rather than on developing a rigorous formal system and providing proofs of its properties The fact that the text presupposes a course offered to philosophy students and serves to introduce them to logic as the language of philosophy has strongly influenced the selection of topics The topics here are controversial and the problems not easily resolved but this text strives to relate the formal logical structures introduced to issues of philosophic interest

Instrumental Reasoning and Systems Methodology Richard Mattessich, 2012-12-06 This book has been written primarily for the applied and social scientist and student who longs for an integrated picture of the foundations on which his research must ultimately rest but hopefully the book may also serve philosophers interested in applied disciplines and in systems methodology If integration was the major motto the need for a methodology appropriate to the teleological peculiarities of all applied sciences was the main impetus behind the conception of the present work This need I felt a long time ago in my own area of analytical and empirical research in accounting theory and management science later I had the opportunity to teach for almost a decade graduate seminars in Methodology which offered particular insight into the methodological needs of students of such applied disciplines as business administration education engineering informatics etc Out of this effort grew the present book which among other things tries on one side to illuminate the difference and relationship between methods of cognition and methods of decision and on the other to sketch a framework suitable for depicting means end relationships in a holistic setting I believe that a systems methodology which incorporates recent endeavours of deontic logic decision theory information economics and related areas would be eminently suited to break the ground for such a future framework Yet systems theory has two major shortcomings which might prevent it from evolving into the desired methodology of applied science

Copyright Office,1973-07 **The Art of Logical Reasoning** Thomas Schwartz,1980 Manifest Rationality Ralph H. Johnson,2012-11-12 This book works through some of the theoretical issues that have been accumulating in informal logic over the past 20 years At the same time it defines a core position in the theory of argument in which those issues can be further explored The underlying concern that motivates this work is the health of practice of argumentation as an important cultural artifact A further concern is for logic as a discipline Argumentative and dialectical in nature this book presupposes some awareness of the theory of argument in recent history and some familiarity with the positions that have been advanced It will be of interest to academics researchers and advanced undergraduate and graduate students in the disciplines of logic rhetoric linguistics speech communication English composition and psychology **American Book Publishing Record** ,1977-03-31 Here s quick access to more than 490 000 titles published from 1970 to 1984 arranged in Dewey sequence with sections for Adult and Juvenile Fiction Author and Title indexes are included and a Subject Guide correlates primary subjects with Dewey and LC classification numbers These cumulative records are available in three separate sets

Transformational Change for People and the Planet Juha I. Uitto,Geeta Batra,2022-01-13 This Open Access book deals with the pressing question of how to achieve transformational change that reconciles development with environmental sustainability It particularly focuses on the role of evaluation in finding sustainable solutions Environment and development are closely interlinked as are human health and ecosystem health The pandemic that began in 2020 demonstrated in no uncertain terms how destruction of habitats has allowed hitherto unknown pathogens spill over to humans wreaking havoc on people s lives and livelihoods We are already seeing the impacts of global climate change in terms of heatwaves forest fires and increased storms The Sustainable Development Goals SDGs explicitly recognize the equal importance of the social economic and environmental dimensions of development In these turbulent times when humankind faces multiple complex challenges it is essential to know that our responses are effective and that they make a positive difference Evaluation can provide invaluable lessons to how we design policies strategies and programs and how we allocate limited resources between competing priorities This book brings together key thinkers and practitioners from the public and private sectors from major multilateral organizations and from bilateral donor agencies to present the latest knowledge and experience on how to evaluate interventions in the nexus of environment and development The book does not promote any particular approach or

methodology but rather emphasizes the need for mixed methods to address the question at hand in the best and most suitable manner. It covers cases from a variety of fields from climate change mitigation and adaptation, energy efficiency and renewable energy, natural resources management, biodiversity conservation and more. This book is not a conference proceedings although it has its roots in the Third International Conference on Evaluating Environment and Development organized by the GEF Independent Evaluation Office in October 2019. The conference brought together a larger number of established and upcoming evaluators, researchers and evaluation users from the Global North and South representing a wide variety of organizations to discuss the frontiers of environment and development evaluation. Following the conference, the editors identified and contacted the participants who made key contributions at the conference and asked them to develop their ideas and papers into book chapters according to a coherent plan. *Books in Print*, 1994
