**Defects and Properties of Semiconductors** J. Chikawa, K. Sumino, K. Wada, 2011-12-25 This volume contains nearly all of the papers presented at the Symposium on Defects and Qualities of Semiconductors which was held in Tokyo on May 17 18 1984 under the sponsorship of the SOCIETY OF NON TRADITIONAL TECHNOLOGY The Symposium was organized by the promoting committee of the research project Quality Development of Semiconductors by Utilization of Crystal Defects sponsored by the Science and Technology Agency of Japan Defect study in semiconductor engineering started originally with seeking methods how to suppress generation of harmful defects during device processing in order to achieve a high yield of device fabrication Recently a new trend has appeared in which crystal defects are positively utilized to improve the device performance and reliability A typical example is the intrinsic gettering technique for Czochralski silicon Thus a new term DEFECT ENGINEERING was born It is becoming more important to control density and distribution of defects than to eliminate all the defects Very precise and deep knowledge on defects is required to establish such techniques as generation and development of defects desired depending on type of devices and degree of integration Electrical optical and mechanical effects of defects should be also understood correctly Such knowledge is essential even for eliminating defects from some specified device regions It is the time now to investigate defect properties and defect kinetics in an energetic way From this point of view all the speakers in this symposium were invited among the most active investigators in the field of defect engineering in Japan

**Charged Semiconductor Defects** Edmund G. Seebauer, Meredith C. Kratzer, 2008-11-14 Defects in semiconductors have been studied for many years in many cases with a view toward controlling their behaviour through various forms of defect engineering For example in the bulk charging significantly affects the total concentration of defects that are available to mediate phenomena such as solid state diffusion Surface defects play an important role in mediating surface mass transport during high temperature processing steps such as epitaxial film deposition diffusional smoothing in reflow and nanostructure formation in memory device fabrication Charged Defects in Semiconductors details the current state of knowledge regarding the properties of the ionized defects that can affect the behaviour of advanced transistors photo active devices catalysts and sensors Features group IV III V and oxide semiconductors intrinsic and extrinsic defects and point defects as well as defect pairs complexes and clusters
