Dr. THIRUMALAICHELVAM SUBRAMANIAM,2019-04-22 Barriers to commercial and industrial energy efficiency improvements in Klang Valley Malaysia are more pronounced due to the existence of factors such as weak policy and regulatory frameworks economic and financial constraints lack of information and other issues This research utilized a qualitative research methodology using a phenomenology approach aimed at enhancing the knowledge of commercial and industrial energy efficiency in Klang Valley Malaysia by investigating the barriers associated with the implementation of energy efficiency measure The eleven main themes and twenty eight sub

themes identified from the study revealed that energy is poorly managed in the various commercial and industrial sectors and that there is an energy efficiency gap resulting from the low implementation of energy efficiency measures. In addition, the study revealed that the most important factors impeding the implementation of cost effective energy efficiency technologies in the organizations are principally economic and financial barriers such as lack of budget funding and access to capital. The study also revealed that these economic and financial barriers are linked to the lack of adequate government framework for commercial and industrial energy efficiency. The study also showed that market factors related to cost reductions resulting from lowered energy use and threats of rising energy prices are the most important drivers for adapting energy efficiency technologies. To motivate energy efficiency there should be established standards, guidelines, roadmaps, regulations and enforcement of regulation suitable for the local environment which at present has not been executed completely in Malaysia.

Economic and Political Consequences of AI: Managing Creative Destruction Günar, Altuğ, 2025-01-14. Firms that innovate on the production function by using unorthodox paths in technology are disrupting routine actions and radically changing people's lives by innovating in a disruptive way while reinventing new ways. Schumpeterian innovations change the routine and traditional business conditions by realizing a new economic equilibrium and innovation in the production function. Today the use of artificial intelligence (AI) and AI related applications and the expansion of their areas of use cause a Schumpeterian process of creative destruction causing a destructive but at the same time creative cycle such as the use of AI within existing technologies, the increase in the opportunities provided by the applications and the replacement of old and new technology. Therefore today the widespread use of AI is one of the most significant technological advancements of recent times encompassing a wide range of fields and significantly changing how economies and societies operate. Economic and Political Consequences of AI: Managing Creative Destruction investigates the impact of AI on economics and politics. Although emerging AI and technologies scare societies and existing firms and companies, it is essential to research the existing uncertainty to eliminate uncertainties and reveal or discuss potential benefits and harms. Covering topics such as creative destruction, cyber politics and the future of employment, this book is an excellent resource for computer developers, technology companies, businesses, professionals, researchers, policy makers, scholars, academicians and more.

Enhancing the Performance of the Services Sector. Organisation for Economic Co-operation and Development, 2005. The services sector now accounts for over 70% of employment and value added in OECD economies. It also accounts for almost all employment growth in the OECD area. But despite its growing weight in OECD

economies productivity growth and employment rates in services remain low in many OECD countries To improve the basis for future economic growth and to address the rapid globalisation of OECD economies the services sector will need to do better than is currently the case But how can services performance be improved And which factors and policies are the most important This report provides an overview of the role of services in economic performance and the factors that affect services sector performance This includes the role of labour and product markets the impact of barriers to trade in services the role of innovation in services and the impacts of information and communications technology ICT on the services sector The report also includes a paper presenting case studies of successful services firms which help illustrate the broader analysis from OECD data The report shows that services are indeed of growing importance to OECD economies but that not all OECD economies have sufficiently adjusted their policies to seize greater benefits from the potential for growth and innovation in the services sector Adjusting these policies will help in preparing OECD economies for a future characterised by an increasingly internationalised and competitive services sector
