Business Method Patents Gregory A. Stobbs, 2011-10-25 In a landmark decision the Federal Circuit Court of Appeals in *Signature Financial v State Street Bank* held that business methods may be patented Recently the US Supreme Court in *Bilski v Kappos* left the door open for the availability of patents for business methods These holdings together with the explosive growth of electronic commerce and technology make the business method patent an important growth area of intellectual property Now in a revised Looseleaf format this completely updated Second Edition of *Business Method Patents* is your guide to the unique opportunities and risks in this emerging area of intellectual property law *Business Method Patents Second Edition* is your authoritative source for expert guidance on The landmark Supreme Court decision in *Bilski v Kappos* USPTO view on business method patents including an overview of BPAI rulings Mechanics of the patent application Prior art searches Drafting claims for business method or model and e commerce inventions Drafting the complete specification Drawings required for business method patents Building a strategic patent portfolio Litigating business method patents International protection for business methods

An Assessment of the Patentability of Business Methods in the US and European Jurisdictions and an Evaluation of the Implications Li Sun, 2013 Advances in information technology have enabled the design and development of innovations in business methods This is particularly felt with IT enabled innovations such as Sun Microsystems stateless shopping Cart for the web which is a Web shopping cart system that does not require any data files to be maintained on either the client or the server Firms attempt to leverage these innovations to gain competitive advantages through cost reduction and other quality improvements which may also pass some benefits on to consumers However such competitive advantages are increasingly difficult to sustain because business method innovations are often easy to copy or imitate Quick and cheap imitation of innovative products and processes may reduce the incentives for firms to invest further in innovation Thus patent protection for business method inventions became a live issue with different outcomes as between the US and Europe At present in the US business method patents are legally recognised since the *State Street Bank* decision 149 F 3d 1368 US Court of Appeals for the Federal Circuit 1998 However the European Patent Office EPO still is noncommittal although some business method related inventions have been granted de facto protection by EPO such as Hitachi Ltd's automatic trading method and apparatus EP 567 291 the Western Union Company's method and system for performing money transfer transactions EP 848 361 etc John Stuart Mill 1909 said the superiority of one country over another in a branch of production often arises only from having begun it sooner 1 So it seems that the uncertainty of EPO's attitude to business method patents may result in a serious negative impact in European industry and economy This thesis sets out to examine what precisely are the attitudes of the US and European institutions to business method patents and to explain what is the present law and how it has arisen

The author thereafter carries out an evaluation of the rationed economic and social effects of allowing disallowing Business Method Patents and to address the question of whether Europe should adopt patent protections for business method related inventions To address these questions the research focuses on the following questions 1 under the current legal framework provided by EPC what business method related inventions can be granted European patent 2 whether business method related inventions are worth protecting by the patents in Europe To answer the latter question the thesis not only analyses the predictable economic and social effects of allowing or alternatively disallowing business method protections generally but we also discuss patent quality which is used by US patent economists to analyse whether business method inventions have a sufficient value to justify the granting of exclusive patent rights in return for disclosure of the inventions specifications to the public In analysing the predictable and likely economic and social effects of allowing or alternatively disallowing business method protections the US position in patenting business method related inventions needs to be considered therefore the thesis also evaluates the US patent legal framework for business method patents and contrasts it with the European position Through analysis of the relevant provisions and decisions the research has concluded that under the current legal framework business method apparatus inventions are patentable in Europe if they can meet the patentability requirements of the European Patent Convention EPC To the effect that if a business method process invention is achieved by a technical means solves a technical problem or achieves a technical effect it is often patentable in Europe provided it meets the EPC patentability requirements However turning to the evaluation of the economic effects of business method patents economic analysis cannot find strong evidence to support increasing the current protections for business method patents At the same time the economic analysis also cannot find strong evidence to oppose present protections for business method patents But when the US position is considered infringement risk would favour it for it appears on balance that there may be some reason to think that Europe should adopt stronger protections for business method patents Furthermore the value of disclosing patented business method related inventions specifications seems also to show that accepting business method patents is an appropriate choice for Europe 1 Mill J S 1909 Principles of Political Economy 7th ed London Longmans Green p 78

The Business Method Patent Myth John R. Allison, Emerson H. Tiller, 2014 Although business methods previously had been patented the Court of Appeals for the Federal Circuit first gave them formal recognition as patentable subject matter in 1998 Internet business method patents have been roundly criticized by most observers as being singularly inferior to most other patents Many have even argued that business methods should not be patentable subject matter As a result Congress and the Patent and Trademark Office PTO singled them out for special treatment All of these criticisms were voiced without empirical support We gathered data on most Internet business method patents issued through the end of 1999 and compared them with a large contemporaneous data set of patents in general We also compared them with patents in fourteen individual technology areas within the general patent data set Our comparison focused on several metrics that we believe serve as good

proxies for patent quality and value We found that Internet business method patents appear to have been no worse than the average patent and possibly even better than most They also appear to have been no worse and possibly even better than patents in most individual technology areas These findings lead us to question the conventional wisdom that these patents were uniquely deficient We briefly explore some possible explanations for the chasm between the accepted view and what we believe to have been the reality including the possibility that negative opinions about these patents may have been characterized by an information cascade More important we believe that efforts to single out these patents for special treatment not only lacked sound justification in the particular case but also reveal more fundamental problems associated with ex ante definitions to carve out any particular technology area for different treatment *Business Method Patents* United States. Meurer, 2014 Technological

breakthroughs occasionally set off floods of inventions and associated patents. The decline of the business method exception to patentability is likely to increase the frequency of patent floods. Future technological breakthroughs might now cause two different patent floods: a flood of patents covering the relevant technology and a flood of patents covering business methods in the new market opened by the breakthrough. Furthermore, a technological breakthrough is no longer a precondition for a patent flood. Any factor that opens a new market might cause a future flood of business method patents. A flood of related patents in a new market creates special problems for competition in addition to the usual problems that arise from market power associated with individual patents. Patent floods strain the resources of the Patent Office and adversely affect the quality of issued patents. Of particular concern, reduced patent quality increases uncertainty about the scope and validity of patents and increases the frequency of patent litigation. The fragility of the many start-ups in new markets makes them vulnerable to strategic patent litigation. Furthermore, a thicket of patents may stultify development of technology because of the cost of securing patent licenses from the large numbers of patent owners. Cross license agreements and patent pools mitigate problems caused by floods but such agreements could be difficult to reach in response to future business method patent floods. The heightened risk of patent floods is a problem unique to business method patents and justifies exceptional treatment of business method inventions. It is probably socially desirable to use the subject matter and nonobviousness standards for patentability to restrict grants of business method patents.

Business Method Patents, Innovation, and Policy
Bronwyn H. Hall, 2015. The trickle of business method patents issued by the United States Patent Office became a flood after the State Street Bank decision in 1998. Many scholars, both legal and economic, have critiqued both the quality of these patents and the decision itself. This paper discusses the likely impact of these patents on innovation. It first reviews the facts about business method and internet patents briefly and then explores what economists know about the relationship between the patent system and innovation. It concludes by finding some consensus in the literature about the problems associated with this particular expansion of patentable subject matter, highlighting remaining areas of disagreement and suggesting where there are major gaps in our understanding of the impact of these patents.

Business Method Patents Introduction

In the digital age, access to information has become easier than ever before. The ability to download Business Method Patents has revolutionized the way we consume written content. Whether you are a student looking for course material, an avid reader searching for your next favorite book, or a professional seeking research papers, the option to download Business Method Patents has opened up a world of possibilities. Downloading Business Method Patents provides numerous advantages over physical copies of books and documents. Firstly, it is incredibly convenient. Gone are the days of carrying around heavy textbooks or bulky folders filled with papers. With the click of a button, you can gain immediate access to valuable resources on any device. This convenience allows for efficient studying, researching, and reading on the go. Moreover, the cost-effective nature of downloading Business Method Patents has democratized knowledge. Traditional books and academic journals can be expensive, making it difficult for individuals with limited financial resources to access information. By offering free PDF downloads, publishers and authors are enabling a wider audience to benefit from their work. This inclusivity promotes equal opportunities for learning and personal growth. There are numerous websites and platforms where individuals can download Business Method Patents. These websites range from academic databases offering research papers and journals to online libraries with an expansive collection of books from various genres. Many authors and publishers also upload their work to specific websites, granting readers access to their content without any charge. These platforms not only provide access to existing literature but also serve as an excellent platform for undiscovered authors to share their work with the world. However, it is essential to be cautious while downloading Business Method Patents. Some websites may offer pirated or illegally obtained copies of copyrighted material. Engaging in such activities not only violates copyright laws but also undermines the efforts of authors, publishers, and researchers. To ensure ethical downloading, it is advisable to utilize reputable websites that prioritize the legal distribution of content. When downloading Business Method Patents, users should also consider the potential security risks associated with online platforms. Malicious actors may exploit vulnerabilities in unprotected websites to distribute malware or steal personal information. To protect themselves, individuals should ensure their devices have reliable antivirus software installed and validate the legitimacy of the websites they are downloading from. In conclusion, the ability to download Business Method Patents has transformed the way we

access information. With the convenience, cost-effectiveness, and accessibility it offers, free PDF downloads have become a popular choice for students, researchers, and book lovers worldwide. However, it is crucial to engage in ethical downloading practices and prioritize personal security when utilizing online platforms. By doing so, individuals can make the most of the vast array of free PDF resources available and embark on a journey of continuous learning and intellectual growth.
