

The background of the book cover features a stylized, glowing sun on the left side, with its rays extending across the sky. In the lower right, there is a silhouette of a power line tower with several wires stretching towards the horizon. The sky is a gradient of blue and yellow, suggesting a sunrise or sunset.

Creating Competitive Power Markets:

Competitive Electricity Markets Fereidoon Sioshansi, 2011-10-10 After 2 decades policymakers and regulators agree that electricity market reform liberalization and privatization remains partly art Moreover the international experience suggests that in nearly all cases initial market reform leads to unintended consequences or introduces new risks which must be addressed in subsequent reform of the reforms **Competitive Electricity Markets** describes the evolution of the market reform process including a number of challenging issues such as infrastructure investment resource adequacy capacity and demand participation market power distributed generation renewable energy and global climate change Sequel to *Electricity Market Reform An International Perspective* in the same series published in 2006 Contributions from renowned scholars and practitioners on significant electricity market design and implementation issues Covers timely topics on the evolution of electricity market liberalization worldwide

Competitive Electricity Markets and Sustainability François Lévêque, 2007-01-01 This book responds to the opening up of electricity markets to competition which has completely changed the nature of power generation The building of new generation and transmission capacity and the setting of the energy mix between nuclear gas and renewable resources are mainly left to private initiative and investors The authors and the editor of this book explore whether or not market forces offer a sustainable future for electricity generation They employ economic theory and method to answer questions such as Will the market be able to ensure adequacy of generation capacity and security

Creating Competitive Markets Marc K. Landy, Martin A. Levin, Martin Shapiro, 2007-03-22 Promoting competition is not just about removing legal controls and then getting out of the way It also requires that policymakers consciously design new markets often with significant rules and regulations to promote efficiency In this book leading experts from academia government and the private sector evaluate efforts at market design

Unbundling Generation and Transmission Services for Competitive Electricity Markets Eric Hirst, Brendan Kirby, 1998

Building Competitive Gas Markets in the EU Jean-Michel Glachant, Michelle Hallac, Miguel Vazquez, 2013-01-01 This highly unique book focuses on market design issues common to most EU gas markets particularly in the context of closer integration It explores in detail the characteristics and requirements of national gas markets in Europe which are constructed as virtual hubs based on entry exit schemes as a requirement of European law The expert contributors analyse gas supply and demand patterns in the EU showing that both have changed following the introduction of liquefied natural gas on the supply side and the growth of gas fired power plants on the demand side The repeated interactions between the transmission operators activity and the gas commodity markets are addressed as is the design of commercial networks in EU markets The contributors also question whether the relationship between commercial and physical networks in terms of the new flexibility requirements of users actually works By way of conclusion two proposals for the EU gas target model are presented both of which tackle the fundamental issues raised in this book as well as the organization of short term transactions and the mechanisms for

investment in vital new long life infrastructure needed to integrate EU markets This volume will be of great interest to practitioners as well as academics researchers and students in the fields of energy economics and industrial economics Both European and non European energy companies and regulatory authorities looking for an independent and analytical overview of European gas markets will also find this book to be a highly valuable resource **Illinois Competitive Energy Association V. Illinois Commerce Commission** ,2014 *Making Competition Work in Electricity* Sally Hunt,2002-10-01

An expert's perspective on how competition can make this industry work There has never been a coherent plan to restructure the electricity industry in the US until now Power expert Sally Hunt gets down to the critical lessons learned from the California power crisis and other deregulated markets in which competition has been introduced properly and successfully Hunt presents sensible solutions to power market reform that have been cultivated over her twenty years of professional work in the industry Sally Hunt New York NY spent twenty years at National Economic Research Associates where she was head of NERA's U S energy practice and a member of the board Coauthor of *Competition and Choice in Electricity* with Graham Shuttleworth 0471957828 she has served as Corporate Economist at Con Edison Deputy Director of the New York City Energy Office and Assistant Administrator of the New York City Environmental Protection Administration Over the years financial professionals around the world have looked to the Wiley Finance series and its wide array of bestselling books for the knowledge insights and techniques that are essential to success in financial markets As the pace of change in financial markets and instruments quickens Wiley Finance continues to respond With critically acclaimed books by leading thinkers on value investing risk management asset allocation and many other critical subjects the Wiley Finance series provides the financial community with information they want Written to provide professionals and individuals with the most current thinking from the best minds in the industry it is no wonder that the Wiley Finance series is the first and last stop for financial professionals looking to increase their financial expertise *Market Power in Power Markets* Sandeep Vaheesan,2013 State and federal initiatives have opened the American electric power industry to competition over the past four decades Although the process has not occurred uniformly across the country wholesale markets exist everywhere today Independent power producers can now construct generation and sell their output to utilities and direct purchasers through bilateral contracts In many regions centralized power markets have also been established and facilitate the sale of billions of dollars in electricity annually through hourly auctions As market forces have replaced direct price regulation in electricity antitrust enforcement however has not expanded its role commensurately Even though a lack of competition has been a chronic problem in power markets and arguably undermined the purpose of industry restructuring the courts have invoked the filed rate doctrine to prohibit private antitrust suits against generators and other market participants accused of collusive behavior The courts have held that federal and state regulation is adequate to maintain competitive markets and have questioned their own ability to deter anticompetitive behavior The courts have used this faulty line of regulatory adequacy

combined with judicial deficiency to immunize power generators from antitrust damages liability While Congress or the Supreme Court should abolish the doctrine and allow for the antitrust laws to be fully enforced in electricity markets eliminating this immunity is not sufficient to create competitive power markets and prevent repeats of the market manipulation seen in the California and Texas markets The existence of private treble damages suits could have deterred collusive conduct like the anticompetitive financial arrangement between two major generators in the New York City wholesale market between 2006 and 2008 Yet the antitrust laws are comparatively powerless to remedy the principal forms of anticompetitive behavior seen in power markets Antitrust jurisprudence in the United States does not proscribe the exercise of unilateral market power and places high hurdles to finding liability against parties accused of colluding tacitly Given the limitations of traditional private antitrust remedies federal and state regulators must focus on creating competitive market structures They can take three concrete steps toward this end police generator consolidation more carefully encourage expansions of the transmission grid and expose more ratepayers to price signals Vigorous application of these broader competition policy measures is necessary to redeem a restructuring project whose results thus far have been at best uncertain **Water Resources Paper** ,1915 *Financial Methods in Competitive Electricity Markets* Shijie Deng,1999
