Computers in Art, Design and Animation John Lansdown, Rae Earnshaw, 2012-12-06 The collection of papers that makes up this book arises largely from the joint activities of two specialist groups of the British Computer Society namely the Displays Group and the Computer Arts Society Both these groups are now more than 20 years old and during the whole of this time have held regular separate meetings In recent years however the two groups have held a joint annual meeting at which presentations of mutual interest have been given and it is mainly from the last two of these that the present papers have been drawn They fall naturally into four classes visualisation art design and animation although as in all such cases the boundaries between the classes are fuzzy and overlap inevitably occurs Visualisation The graphic potential of computers has been recognised almost since computing was first used but it is only comparatively recently that their possibilities as devices for the visualisation of complex and largely abstract phenomena has begun to be more fully appreciated Some workers stress the need to be able to model photographic

reality in order to assist in this task They look to better algorithms and more resolution to achieve this end Others Alan Mackay for instance suggest that it is not just a matter of providing more and more pixels It is a matter of providing congenial clues which employ to the greatest extent what we already know *Electronic Art* Roger F. Malina,W. Van der Plas,T. Hokken,J. den Biggelaar,2013-10-22 Computers are more and more becoming creative tools in music as well as in the visual arts and design In the last few years it has become clear that digital technology provides a platform for multimedia productions as well as a medium for new art forms Computer Music and Computer Graphics Animation have their own international forums The need was felt however to bring together the diverse disciplines within art and technology in one international event the First International Symposium on Electronic Art FISEA The Symposium attracted considerable interest and hundreds of papers and proposals were submitted of which a selection were accepted This book also published as a supplement to the journal Leonardo publishes 20 of these selected papers under the editorship of Wim van der Plas Ton Hokken and Johan den Biggelaar This richly illustrated issue on Electronic Art reflects the enormous international interest which FISEA generated and will further stimulate interest in applications of new technology in music visual arts and design
